

**FOR IMMEDIATE RELEASE**

**Valley City, North Dakota  
March 1, 2018**

Preventice Services, Houston, Texas announced today it will establish a remote heart monitoring center in Valley City, North Dakota. The Texas based company provides diagnostic services to cardiologists at clinics and hospitals providing real time information for better patient care. The heart monitor prescribed by doctors, records a complete beat-to-beat story of a patient's heart that is transmitted electronically to the Preventice Monitoring Center and relayed to the doctor. Comprehensive data collected during the patient's study is sent on to the doctor to assist in developing care plans for better heart health.

The Center also provides customer facing services including patient registration and insurance processing.

Jon Otterstatter, President & CEO, said the Company has experienced 20% growth annually in recent years with that trend expected to continue. "Expanding to Valley City, along with our continued employee and facility growth in Houston and California, will provide the resources for us to better serve our increasing patient population throughout the United States"

Melanie Arnett, HR Director, said the priority is hiring the Monitoring Center Manager who will serve as the main liaison between North Dakota and its other locations. "The ideal candidate for this position will have a medical background, preferably an RN or LPN with a bend toward cardiology." Arnett said.

Valley City operations will begin with 25 people with additional hires in the next 12 months. The next opportunity is the roll out of a training program to develop candidates to be EKG technicians. Preventice offers competitive wages and benefits for all of its positions.

"We're excited that Preventice Services has chosen Valley City for its new center, said JoAnn Hooper, President of the Valley City-Barnes County Development Corporation. The Company will provide well-paying employment opportunities for many local citizens."

Preventice has its corporate headquarters in Egan, MN with operations in Rochester, MN and San Francisco, California and Houston, Texas. The Valley City Monitoring Center is expected to be operational by April 15<sup>th</sup>.
