## 1. INTRODUCTION

Kwik Trip Inc.'s proposed convenience store is on an 8.5-acre parcel in the southeast quadrant of Iowa Highway (IA) 163 and Washington Street in Pella, Iowa. Access to the development is planned as additional approaches to the intersections of Washington Street with IA 163 Northbound (NB) Ramp and Old 163.

This study evaluated traffic forecasts, peak hour traffic operations and improvement needs associated with the planned development. The scope of this analysis included three study intersections on Washington Street with IA 163 Southbound (SB) Ramp / 15<sup>th</sup> Street, IA 163 NB Ramp, and Old 163. Figure 1 shows the proposed development parcel and study intersections.

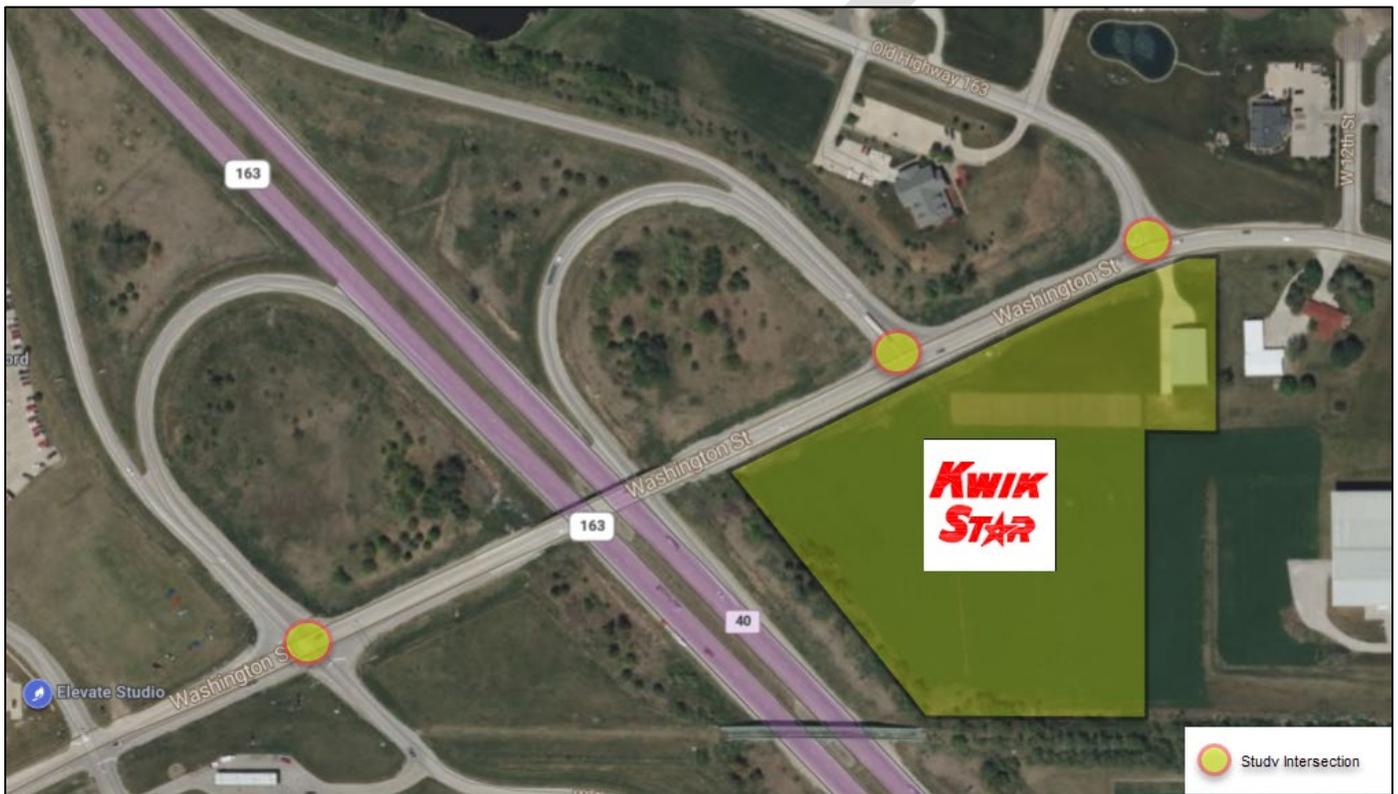

Figure 1: Study Area

## 2. EXISTING CONDITIONS

Land uses surrounding the proposed site are a mix of industrial, commercial, and agricultural. The proposed site is along Washington Street which is a two-lane rural section minor arterial with a posted speed of 35 mph. Washington Street is the major route to Pella's central business district. Adjacent to the site is Iowa Highway 163 which is a four-lane divided expressway with full access control through Pella. The IA 163 and Washington St interchange has a partial clover leaf configuration with loop ramps in the northwest and northeast quadrants.

Directly adjacent to the proposed site is the IA 163 NB Ramp and Washington St intersection. A south leg is planned for this intersection as an access to the site. The exit ramp approach to the intersection is stop controlled.

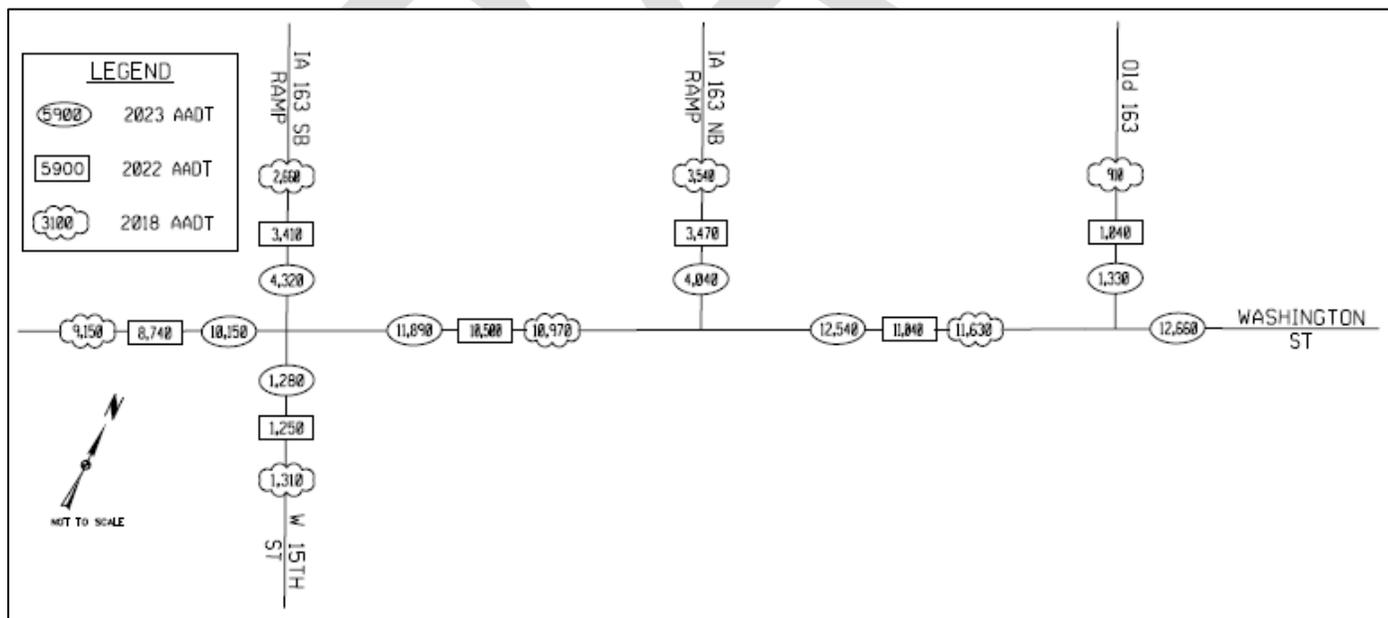

The IA 163 SB Ramp terminal intersection is 1,100’ west of the IA 163 NB Ramp terminal intersection. The IA 163 SB Ramp intersection south approach, S 15<sup>th</sup> Street, services one commercial property and the Pella Municipal Airport. The intersection is signalized with protected/permissive left turn phasing on the Washington Street approaches. The Washington Street approaches have dedicated left turn lanes with 100’ of storage for both left turn lanes. The IA 163 SB Ramp approach has a dedicated right turn lane with 100’ of storage.

The Old 163 and Washington Street intersection is a T-intersection with stop control for the SB Old 163 approach. A right turn island and short channelized right turn lane are provided for this approach... Old 163 is a two-lane rural section collector that services commercial and residential properties. The posted speed limit on Old 163 is 35 mph.

**a. Traffic Data**

Turning movement 24-hour traffic counts were performed by Snyder & Associates in October of 2023 at the intersections of Washington Street with IA 163 SB Ramp, IA 163 NB Ramp, and Old 163. Iowa DOT conducted turning movement counts at the intersections of Washington Street with IA 163 SB Ramp and IA 163 NB Ramp in 2022 and 2018. Iowa DOT conducted 24-hour two-way counts on Old 163 north of Washington Street in 2002 and 2018. Detailed traffic count data is included in the appendix.

Figure 2 summarizes annual average daily traffic (AADT) of the traffic counts conducted. The data generally shows slight growth from 2018 to 2022 to 2023. Traffic growth trends follow Pella’s population trend which has also increased slightly over the same period.

**Figure 2: Annual Average Daily Traffic**

**b. Crash History**

Crash data at the study intersections were reviewed using the Iowa DOT online Iowa Crash Analysis Tool. Table 1 summarizes 5-year period (2018-2022) of crash data for the study intersections.

**Table 1: 2018-2022 Crash History**

Intersection	Crashes (Injuries)	Injury Severity	Crash Rate*	Predominant Major Causes (Crashes)	Predominant Crash Types (Crashes)
IA 163 SB Ramp/ 15 <sup>th</sup> St & Washington St	13 (2)	2 Possible	0.45	<ul style="list-style-type: none"> <li>Followed too close (5)</li> <li>Other (3)</li> <li>FTYROW: Making Left Turn (2)</li> </ul>	<ul style="list-style-type: none"> <li>Rear-end (10)</li> </ul>
IA 163 NB Ramp & Washington St	6 (1)	1 Possible	0.20	<ul style="list-style-type: none"> <li>Other (2)</li> <li>Followed too close (1)</li> <li>Driving too fast for conditions (1)</li> <li>Operating reckless (1)</li> </ul>	<ul style="list-style-type: none"> <li>Rear-end (6)</li> </ul>
Old 163 & Washington St	3 (1)	1 Possible	0.14	<ul style="list-style-type: none"> <li>Followed too close (2)</li> <li>Driving too fast for conditions (1)</li> </ul>	<ul style="list-style-type: none"> <li>Rear-end (2)</li> <li>Broadside (1)</li> </ul>

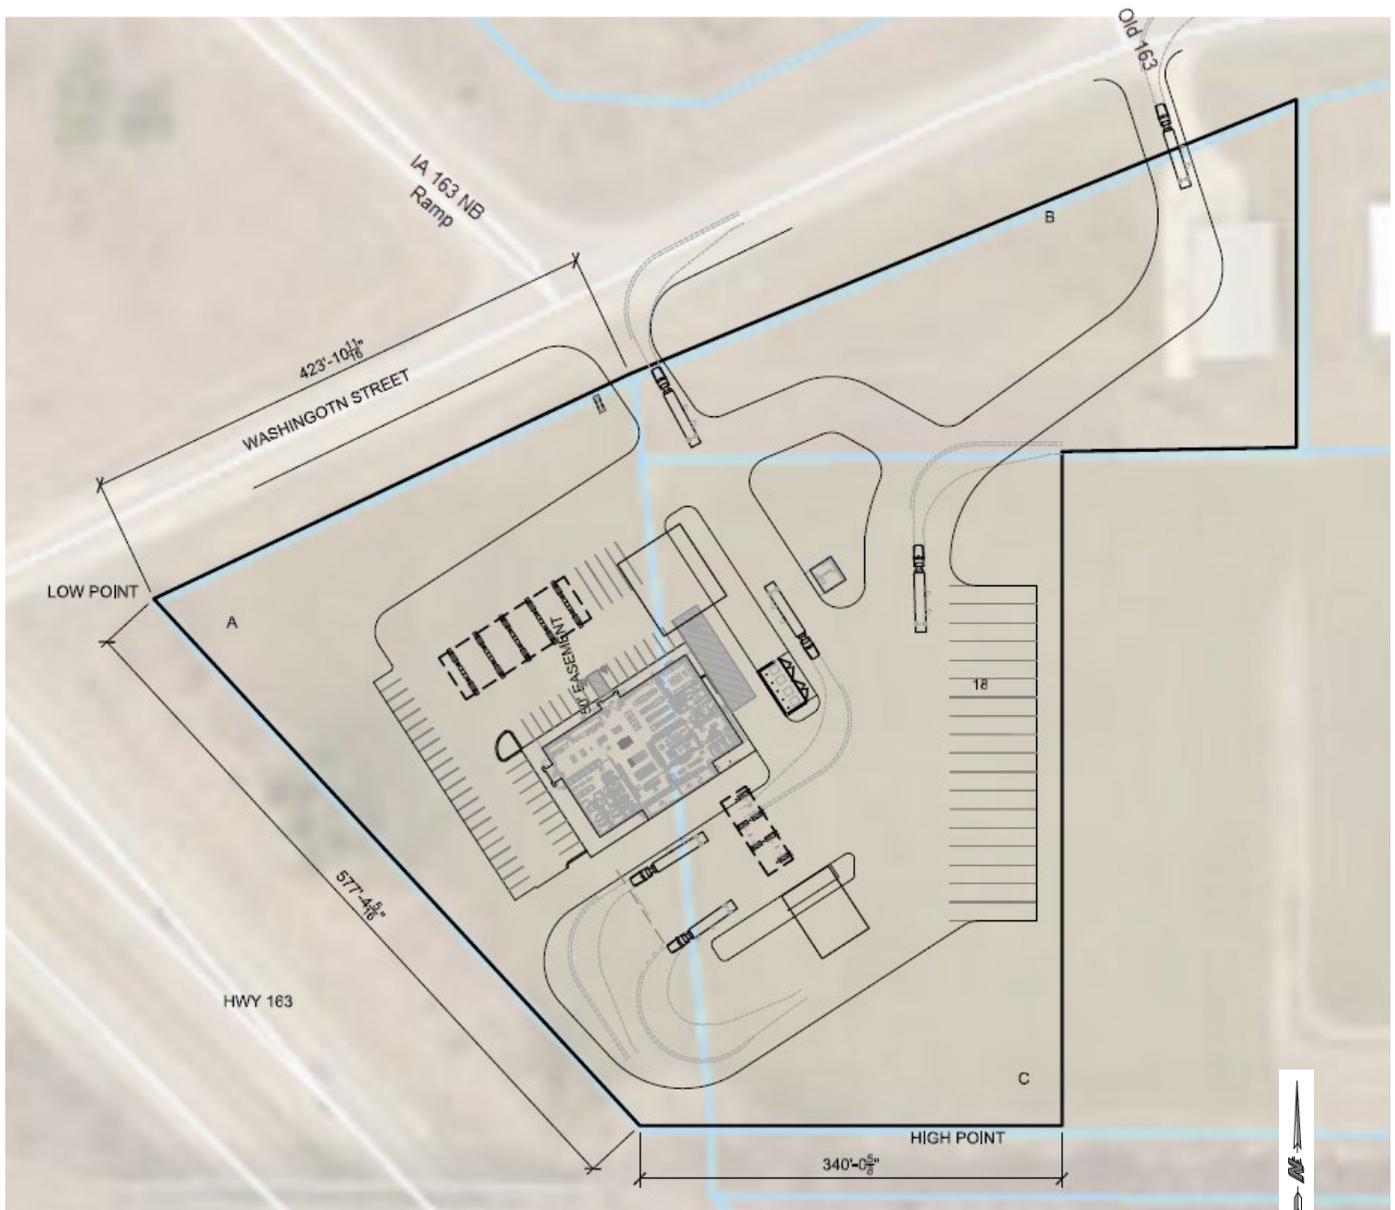

\*Crashes per million entering vehicles  
FTYROW = Failure to Yield Right of Way

The highest crash rate (0.45) for the study intersections is at the IA 163 SB Ramp / 15<sup>th</sup> St and Washington Street intersection. Crash rates at all study intersections are relatively low with no apparent safety deficiency. Rear-end crashes are the most predominant crash type for the study intersections. Crash data summary is included in the appendix.

### 3. PROPOSED DEVELOPMENT

The proposed development, shown in Figure 3, is an approximately 9,000 square foot convenience store with 20 passenger vehicle fueling positions and 3 large truck fueling lanes. Proposed access to the site includes the following:

- West access – proposed fourth leg of the intersection of Washington Street and IA 163 NB Ramp
- East access - proposed fourth leg of the intersection of Washington Street and Old 163

**Figure 3: Kwik Star Preliminary Site Layout**

## 4. ANALYSIS OF FUTURE CONDITIONS

### a. Trip Generation

Trip generation estimates were derived from procedure provided by the *ITE Trip Generation Manual*. The number of trips generated by the proposed store was determined to be the average of number trips between the *ITE Trip Generation Manual, 11<sup>th</sup> Edition* and the *Wisconsin DOT Convenience Store/Gas Station Trip Generation Study 2023* for Land Use Code 945 (Convenience Store/Gas Station – gross floor area (GFA) 9,100). The average number of trips was used because ITE's rates are believed to be excessively high for this site and WISDOT rates are based on a lower number of data points for this type of store. Utilizing the average number of trips, the estimated trips fall within Kwik Star's estimated number of peak hour trips between 350

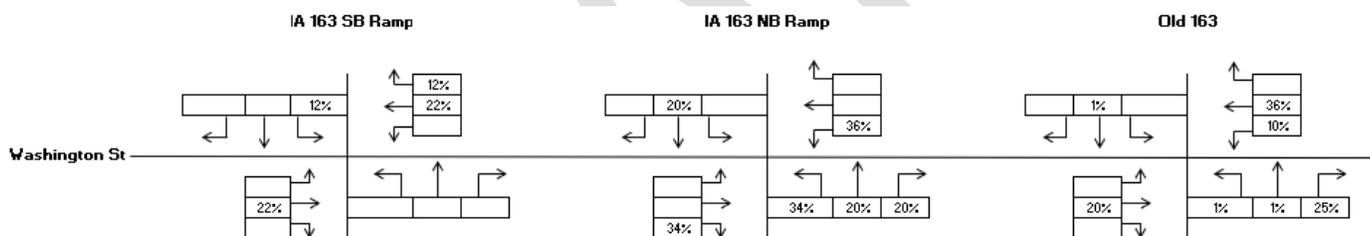

and 420 passenger vehicle trips in the peak hour. Only 2% of their nearly 800 similar stores generate over 420 vehicles per hour. To remain within the range of existing data points of similar sites that the ITE trip generation rates are based on, 16 VFP was used for trip generation estimates. Even though this location does have truck fueling lanes, only passenger VFP were only considered for trip generation as it anticipated that only one to two trucks will access the site during the peak hours. So, truck generation was excluded from the estimated generated trips. Estimated trip generation is shown in Table 2. During each time period, 50% of the trips generated enter the site and 50% of the trips generated exit the site.

**Table 2: Trip Generation – Opening Year 2024**

Source	Daily		AM		PM	
	Rate	Total Trips	Rate	Total Trips	Rate	Total Trips
ITE	345.75(VFP)	5530	31.6(VFP)	510	26.9(VFP)	430
WISDOT	80.61(VFP) + 2340	3630	5.91(VFP) + 145.74	240	5.91(VFP) + 168.12	260
<b>Average</b>		<b>4580</b>		<b>380</b>		<b>350</b>

**b. Trip Distribution**

Distribution of the site generated trips to the study intersections was estimated based on background traffic data. It is estimated that site generated traffic will be approximately 34% from the west, 20% from the north, and 46% from the east. The trip distribution of site generated trips for each intersection is shown in Figure 4 below.

**Figure 4: Trip Distribution**

Large percentages of the trips for the convenience store land use are “pass-by trips”, meaning trips which are already in the adjacent street traffic stream. The *ITE Trip Generation Handbook, 3<sup>rd</sup> Edition* average pass-by trip percentages are 62% in the AM peak period and 56% in the PM peak period. A conservative pass-by trip percentage of 50% was used for this analysis.

**c. Background Traffic**

The 2018, 2022 and 2023 traffic counts at the study intersections were reviewed, and it was determined that the 2022 and 2023 are generally comparable. Opening Year 2024 traffic volumes utilized the 2023 existing traffic volumes as background traffic. Design Year 2044 traffic includes background traffic with an annual growth of 1%. Traffic volumes at the study intersections and proposed site accesses are shown in Exhibit 2 in the appendix. The traffic volumes are shown for existing traffic, generated trips, and total traffic for the AM and PM peak hours in the Opening Year and the Design Year without and with the proposed development.

**d. Turn Lane Analysis**

The potential need for left or right turn lanes at the study intersections was evaluated using NCHRP 457 criteria. It was determined that eastbound and westbound left turn lanes are warranted on Washington St at the IA 163 NB Ramp intersections with projected opening year traffic during both the AM and PM peak periods. At the intersection of Washington St with Old 163, traffic volumes satisfied the left turn lane warrant on Washington St with projected opening year traffic during the AM and PM peak periods with the exception of AM peak period westbound. Turn lane warrant analysis worksheets are included in the appendix.

**e. Traffic Signal Warrant Analysis**

Traffic signal warrant volume criteria from the *Manual on Uniform Traffic Control Devices, 2009 Edition* were reviewed. Applicable traffic signal warrant criteria include Warrant 1 (Eight-Hour Vehicular Volume), Warrant 2 (Four-Hour Vehicular Volume), Warrant 3 (Peak Hour Volume), and Warrant 7 (Crash Experience). Rural values were applied due to Pella’s population. Table 3 summarizes the traffic signal warrant analysis for existing conditions and opening year traffic conditions. Analysis found that with existing traffic, Warrants 1-3 are met at the NB Ramp intersection and Warrants 2-3 are met at the Old 163 intersection.

**Table 3: Traffic Signal Warrant Analysis (Number of hours)**

Warrant	IA 163 NB Ramp		Old 163	
	Existing	Opening	Existing	Opening
Warrant 1A – 8 Hour Minimum Volume	No (7)	No (6)	No (0)	No (0)
Warrant 1B – 8 Hour Interruption of Traffic	Yes (13)	Yes (13)	No (5)	No (5)
Warrant 2 – 4-Hour Volume	Yes (11)	Yes (10)	Yes (4)	Yes (4)
Warrant 3 – Peak Hour Volume	Yes	Yes	Yes	Yes
Warrant 7 – Crash Experience	No	No	No	No

**f. Capacity Analysis**

Intersection capacity analyses were completed using the *Highway Capacity Manual 6<sup>th</sup> Edition (HCM 6)* methodology incorporated into *Synchro 11* traffic modeling analysis software. Table 4 shows the Level of Service (LOS) criteria for determining operational performance. LOS A provides the least delay, and LOS F provides the most delay. Typically, LOS D is the minimum acceptable LOS for urban intersections. However, LOS E-F is not unusual for stop controlled minor street or driveway approaches to higher volume arterial streets during peak hours.

Capacity analysis results for existing roadway conditions, 2024 opening year, and 2044 design year are shown in Table 5. Opening year and design year analyses each included analysis scenarios of store open with of no intersection roadway improvements and store open with the recommended traffic signal control and left turn lanes on Washington St at the IA 163 NB Ramp intersection. A design year analysis also included an existing conditions scenario. The Kwik Star accesses were analyzed as single lane approaches.

**Table 4: Level of Service (LOS) Definition**

LOS	Average Delay per Vehicle (seconds)	
	Signalized Intersection	Unsignalized Intersection
A	< 10	< 10
B	10 to 20	10 to 15
C	20 to 35	15 to 25
D	35 to 55	25 to 35
E	55 to 80	35 to 50
F	> 80 or V/C > 1.0	> 50 or V/C > 1.0

V/C = Volume to Capacity Ratio

**Table 5: Capacity Analysis Results**

Year -Scenario	Intersection	Control Type	AM Peak		PM Peak	
			Delay (sec)	LOS	Delay (sec)	LOS
2023 – Existing Conditions	IA 163 SB Ramp & Washington St	Signal	10	B	14	B
	IA 163 NB Ramp & Washington St	SB STOP	15	C	21	C
	Old 163 & Washington St	SB STOP	16	C	23	C
2024 – Store Open, No Roadway Improvement	IA 163 SB Ramp & Washington St	Signal	13	B	25	C
	IA 163 NB Ramp & Washington St	NB STOP	63	F	>300	F
		SB STOP	37	E	56	F
	Old 163 & Washington St	NB STOP	15	C	18	C
		SB STOP	23	C	42	E
2024 – Store Open, Roadway Improvement	IA 163 SB Ramp & Washington St	Signal	13	B	25	C
	IA 163 NB Ramp & Washington St	Signal	13	B	13	B
	Old 163 & Washington St	NB STOP	15	C	18	C
		SB STOP	23	C	42	E
2044 – Existing Conditions	IA 163 SB Ramp & Washington St	Signal	11	B	27	C
	IA 163 NB Ramp & Washington St	SB STOP	20	C	37	E
	Old 163 & Washington St	SB STOP	20	C	35	E
2044 – Store Open, No Roadway Improvement	IA 163 SB Ramp & Washington St	Signal	11	B	55	D
	IA 163 NB Ramp & Washington St	NB STOP	152	F	>300	F
		SB STOP	95	F	>300	F
	Old 163 & Washington St	NB STOP	19	C	26	D
		SB STOP	34	D	100	F
2044 – Store Open, Roadway Improvement	IA 163 SB Ramp & Washington St	Signal	25	C	45	D
	IA 163 NB Ramp & Washington St	Signal	16	B	17	B
	Old 163 & Washington St	NB STOP	19	C	26	D
		SB STOP	34	D	100	F

Analysis results show acceptable operational level of service for all scenarios with the store open with proposed roadway improvements except for the Old 163 & Washington Street intersection north approach in the design year. The approach volumes are relatively low, but signalization of this intersection may ultimately be needed. The delay projected on Old 163 approach is primarily due to due from the background traffic on

Washington Street and not the development generated traffic. The analysis results for scenarios with the store open without proposed roadway improvements did not have acceptable operational level of service.

**g. Vehicle Queuing Analysis**

Vehicle queuing was evaluated using Synchro for existing conditions, year 2024 store open without roadway improvements, and 2044 design year with store open with proposed roadway improvements. Calculated 95<sup>th</sup> percentile queue lengths are shown in Table 6. Existing and proposed turn lane lengths are also listed.

## 5. CONCLUSIONS & RECOMMENDATIONS

Based on analyses performed, the following recommendations and conclusions are provided:

- The west Kwik Star proposed access should align with IA 163 NB Ramp lanes. Proposed access to have one entering lane and one shared left/through/right exiting lane. Proposed access to be designed to accommodate large truck turning paths not to encroach into other lanes.
- The east Kwik Star proposed access should align with Old 163 lanes. Proposed access to have one entering lane and one shared left/through/right exiting lane. Proposed access to be designed to accommodate large truck turning paths not to encroach into other lanes.
- IA 163 SB Ramp & Washington Street intersection – No physical improvements needed. Coordinate signal timings with adjacent IA 163 NB Ramp proposed traffic signal.
- IA 163 NB Ramp & Washington Street intersection
  - Provide traffic signalization of the intersection with fully actuated vehicle detection on all approaches. Coordinate signal timings with adjacent IA 163 SB Ramp traffic signal.
  - Washington Street eastbound and westbound dedicated left turn lanes should be provided with minimum storage length of 100'. A 100' storage length for the eastbound approach will not require widening on the IA 163 overpass bridge.
  - Southbound approach to maintain current lane configuration and will become a shared left/through/right lane.
- Old 163 & Washington Street intersection – No physical improvements recommended to the west, north, or east approaches. Even though traffic signalization is warranted, traffic signalization is not recommended due to the proximity to the proposed signalized intersection of IA 163 NB Ramp.

Traffic conditions should be continuously monitored to determine if intersection delays become excessive thus requiring traffic signalization.

 Number of hours (10) volumes exceed minimum >= minimum required (4).

Warrant 3 - Peak Hour.....Satisfied

**Warrant 3A - Peak Hour Delay.....Satisfied**  
 Number of one hour periods (12) volumes exceed minimum >= required (1). Delay data not evaluated.

**Warrant 3B - Peak Hour Volumes.....Satisfied**  
 Volumes exceed minimums for at least one hour period.

Warrant 4 - Pedestrian Volumes.....Not Evaluated

Warrant 5 - School Crossing.....Not Evaluated

Warrant 6 - Coordinated Signal System.....Not Evaluated

**Warrant 7 - Crash Experience.....Not Satisfied**  
 Number of accidents (0) is less than minimum (5). Volume minimums are met.

Warrant 8 - Roadway Network.....Not Evaluated

Warrant 9 - Intersection Near a Grade Crossing.....Not Evaluated

<b>Warrant 1 - Eight Hour Vehicular Volumes</b> .....	<b>Not Satisfied</b>
<b>Warrant 1A - Minimum Vehicular Volume</b> ..... <b>Not Satisfied</b>	
Required volumes reached for 0 hours, 8 are needed	
<b>Warrant 1B - Interruption of Continuous Traffic</b> ..... <b>Not Satisfied</b>	
Required volumes reached for 5 hours, 8 are needed	
<b>Warrant 1C - Combination of Warrants</b> ..... <b>Not Satisfied</b>	
Required 1A volumes reached for 0 hours, 8 are needed	
Required 1B volumes reached for 7 hours, 8 are needed	
<b>Warrant 2 - Four Hour Volumes</b> .....	<b>Satisfied</b>
Number of hours (4) volumes exceed minimum >= minimum required (4).	
<b>Warrant 3 - Peak Hour</b> .....	<b>Satisfied</b>
<b>Warrant 3A - Peak Hour Delay</b> ..... <b>Not Satisfied</b>	
Approach volumes on minor street don't exceed minimums for any one hour period. Delay data not evaluated.	
<b>Warrant 3B - Peak Hour Volumes</b> ..... <b>Satisfied</b>	
Volumes exceed minimums for at least one hour period.	
<b>Warrant 4 - Pedestrian Volumes</b> .....	Not Evaluated
<b>Warrant 5 - School Crossing</b> .....	Not Evaluated
<b>Warrant 6 - Coordinated Signal System</b> .....	Not Evaluated
<b>Warrant 7 - Crash Experience</b> .....	<b>Not Satisfied</b>
Number of accidents (0) is less than minimum (5). Volume minimums are not met.	
<b>Warrant 8 - Roadway Network</b> .....	Not Evaluated
<b>Warrant 9 - Intersection Near a Grade Crossing</b> .....	Not Evaluated

**Traffic Signal Warrant**  
 Washington St & Old 163  
 Opening Conditions 2024

Study Name: Pella Kwik Star Old 163 Opening  
 Study Date : 10/29/2023

**Signal Warrants - Summary**

**Major Street Approaches**

Eastbound: Washington St  
 Number of Lanes : 1

Total Approach Volume: 6,301

Westbound: Washington St

Number of Lanes : 1

Total Approach Volume: 7,056

**Minor Street Approaches**

Northbound: Old 163  
 Number of Lanes : 1

Total Approach Volume: 0

Southbound: Old 163

Number of Lanes : 1

Total Approach Volume: 664

**Warrant Summary (Rural Values Apply)**

Warrant 1 - Eight Hour Vehicular Volumes.....**Not Satisfied**

Warrant 1A - Minimum Vehicular Volume.....**Not Satisfied**  
 Required volumes reached for 0 hours, 8 are needed

Warrant 1B - Interruption of Continuous Traffic.....**Not Satisfied**  
 Required volumes reached for 5 hours, 8 are needed

Warrant 1C - Combination of Warrants.....**Not Satisfied**  
 Required 1A volumes reached for 0 hours, 8 are needed  
 Required 1B volumes reached for 7 hours, 8 are needed

Warrant 2 - Four Hour Volumes.....**Satisfied**  
 Number of hours (4) volumes exceed minimum >= minimum required (4).

Warrant 3 - Peak Hour.....**Satisfied**

Warrant 3A - Peak Hour Delay.....**Not Satisfied**  
 Approach volumes on minor street don't exceed minimums for any one hour period. Delay data not evaluated.

Warrant 3B - Peak Hour Volumes.....**Satisfied**  
 Volumes exceed minimums for at least one hour period.

Warrant 4 - Pedestrian Volumes.....**Not Evaluated**

Warrant 5 - School Crossing.....**Not Evaluated**

Warrant 6 - Coordinated Signal System.....**Not Evaluated**

Warrant 7 - Crash Experience.....**Not Satisfied**  
 Number of accidents (0) is less than minimum (5). Volume minimums are not met.

Warrant 8 - Roadway Network.....**Not Evaluated**

Warrant 9 - Intersection Near a Grade Crossing.....**Not Evaluated**
