APPLICATION NOTE

Dante Interface

The Dante AVIO output adapter from Audinate model ADP-DAO-AU-0X2AVIO allows the Dante network to send audio to Lencore's i.Net system. The Dante AVIO adapter is a fully functional Dante interface, with all the features you'd expect from Dante audio networking. Cost effective and compact, the Dante AVIO adapter delivers bit-perfect audio reproduction, super-low latency and sample-accurate synchronization across the entire network.

The adapter includes 2-channels of audio for music and paging. The adapter's audio is controlled by the standard Dante software. There are no additional software or drivers to install.

The Dante AVIO adapter is a complete, high-performance Dante device, with the automation and ease of use that make Dante the world's most popular audio networking solution.
