

The Benefits of Sound Masking

A Lencore Noise Management Solution was included as an optional, but essential part of this project. Sound masking provides important benefits including speech privacy, compliance, comfort, security, and increased productivity. It is especially important for projects with open office plans, shared workspaces, conference rooms, and private offices adjacent to non-private areas. Lencore Noise Management Solutions are most efficiently installed as standalone systems or alongside other low voltage, A/V, or IT infrastructure, and elevates the overall experience of an environment.

Ensure Speech Privacy

Conversations become harder to overhear, giving employees confidence to discuss important matters securely.

Boost Productivity

Minimize distractions, allowing employees to focus and achieve more with a proven return on investment.

Enhance Comfort and Well-Being

Space utilization has changed tremendously since 2020 – whether it is less occupied due to hybrid in-office schedules or more occupied because more people are in a smaller footprint, sound masking creates a more comfortable environment.

What is Sound Masking and How Does it Work?

Sound masking gently raises ambient background noise to make indirect speech less intelligible and therefore less distracting. It blends into the environment, improving comfort without being disruptive to occupants.

How are Sound Masking Systems Designed?

Every project is unique. Our floor plans are professionally designed to address the space's specific needs to achieve the desired results, leveraging cost-effective, widely available tools in proven formats. Electronics sit in an IT or MDF closet and attach to sound emitting speakers via standard category cable. Speaker types are chosen based on the design of the space and its aesthetic requirements.

Where is Sound Masking Used?

Corporate Offices - Limit distractions, improve focus, and ensure speech privacy for better employee comfort, productivity, and security.

Healthcare - Ensure HIPAA compliance and raise patient satisfaction with increased HCAHPS scores.

Government - Protect sensitive information with advanced technology, while meeting BAA and TAA compliance standards - Made in the USA.

Sound Masking also enhances privacy and productivity for Legal, Financial, Insurance, Education, Call Centers, Hotel Guestrooms and many other commercial environments.

Elevate Every Project with Lencore's Sound Masking, Paging, & Audio Solutions

Whether for office, healthcare, government, or education, Lencore's noise management solutions transform how people experience their environment. Our proprietary sound masking is tuned just above indirect speech levels, shrinking the range of intelligible speech, providing privacy and reduced distractions.

Why Choose Lencore

Unmatched Sound Quality

- Green Sound® - our scientifically designed algorithm developed to be the most comfortable and effective
- Up-firing and down-firing speakers, aesthetic options
- Capable of meeting acoustical consultant-specified curves

Top-Notch Customer Service

- FREE 24-Hour Design & Quotation*
- Expert Tech Support Team

**In most cases; dependent on project complexity*

Industry-Leading 10-Year Warranty

Made in the USA - BAA and TAA Compliant

Sound Masking - A Proven Return on Investment

- Workplace interruptions result in a 25-minute loss of productivity per occurrence, on average
- Sound masking increases productivity by minimizing distractions, paying for itself in less than 4 months
- Workplaces with sound masking benefit from higher employee retention due to increased satisfaction
- Don't wait - installation is 2 – 4 times less expensive during initial construction phase or during a renovation
- Most efficiently installed alongside other low-voltage, AV or IT systems
