

Take a Local Cover Crop Tour

Want to compare different cover cropping systems to see what may work best on your farm? Take a look at the fields on our cover crop tour that utilize cover crops in different ways to reduce erosion, improve water quality, and improve soil health. These sites will be available to see throughout the growing season so you can track the growth of the different systems. If you visit any tour stops be sure to fill out the online form to let us know what you thought, and if you are interested in finding out more about how you can implement cover crops on your farm. The Black Hawk Lake Watershed Project, Farm to River Partnership Project, NRCS, and IDALS have opportunities for cost share and can help you in creating a cover cropping plan. Contact information for the Black Hawk Lake and Farm to River coordinators are below.

The QR codes below can be scanned using a smartphone to take you to web pages related to the tour. The first takes you to a survey about the tour, the second will take you to a Google Map to help you find the sites. The Google Map also contains additional information on the sites and pictures from earlier in the year. The pictures will be updated throughout the spring. Contact Ethan or Joe for email links to the survey and map or a paper copy if you are unable to scan the codes.

Scan here to take the survey.
