

Winter Weather Possible Wednesday-Early Thursday

February 17, 2025
5:41 PM

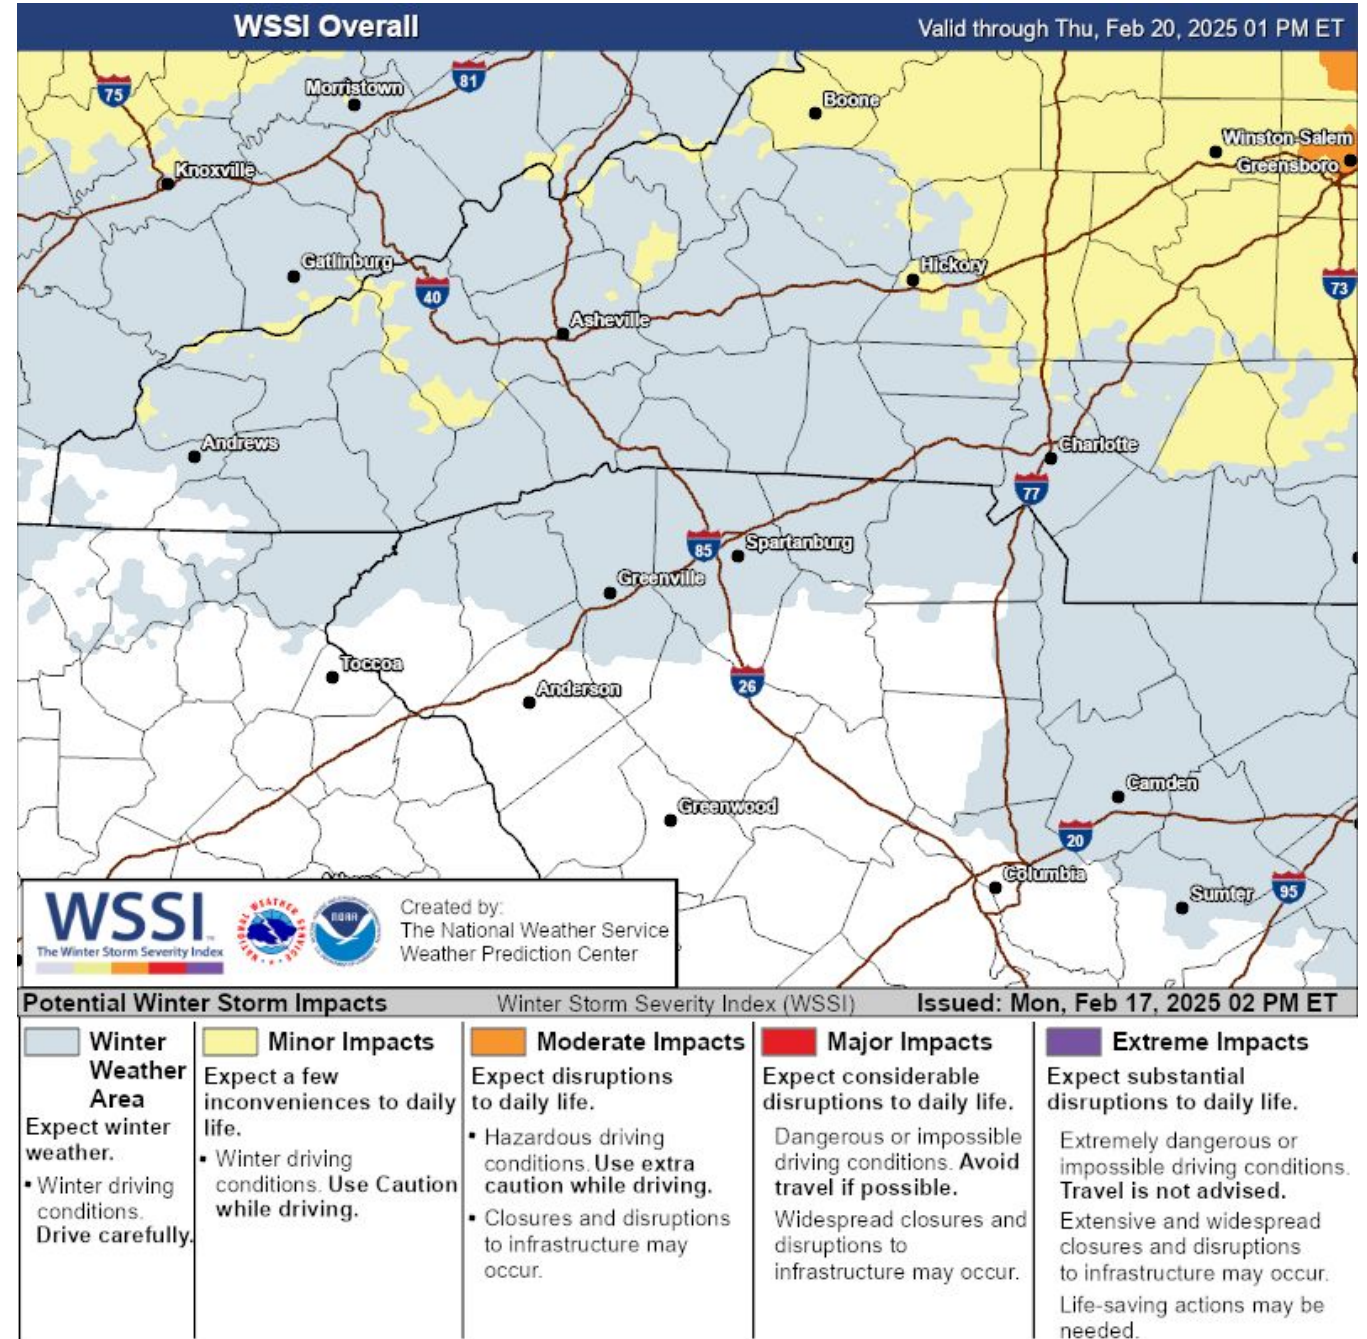

Decision Support Briefing 6 for the western Carolinas and northeast Georgia

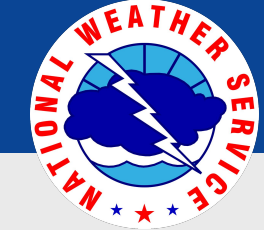

NEW Important Updates

- Confidence continues to increase slowly that part of the region could be affected by wintry precipitation Wednesday into Wednesday night.
- Confidence in the amount of precipitation remains low.

Key Messages

- Low pressure moving south of the area will spread precipitation across the region Wednesday and Wednesday night with marginally cold air in place.
- Most of the region will experience some form of wintry precipitation at some point during that time.
- Temperatures are expected to be in the lower to middle 30s while the bulk of the precipitation falls.
- Snow and ice amounts look to be generally light and less than Warning criteria, thus a Winter Storm Watch HAS NOT been issued.

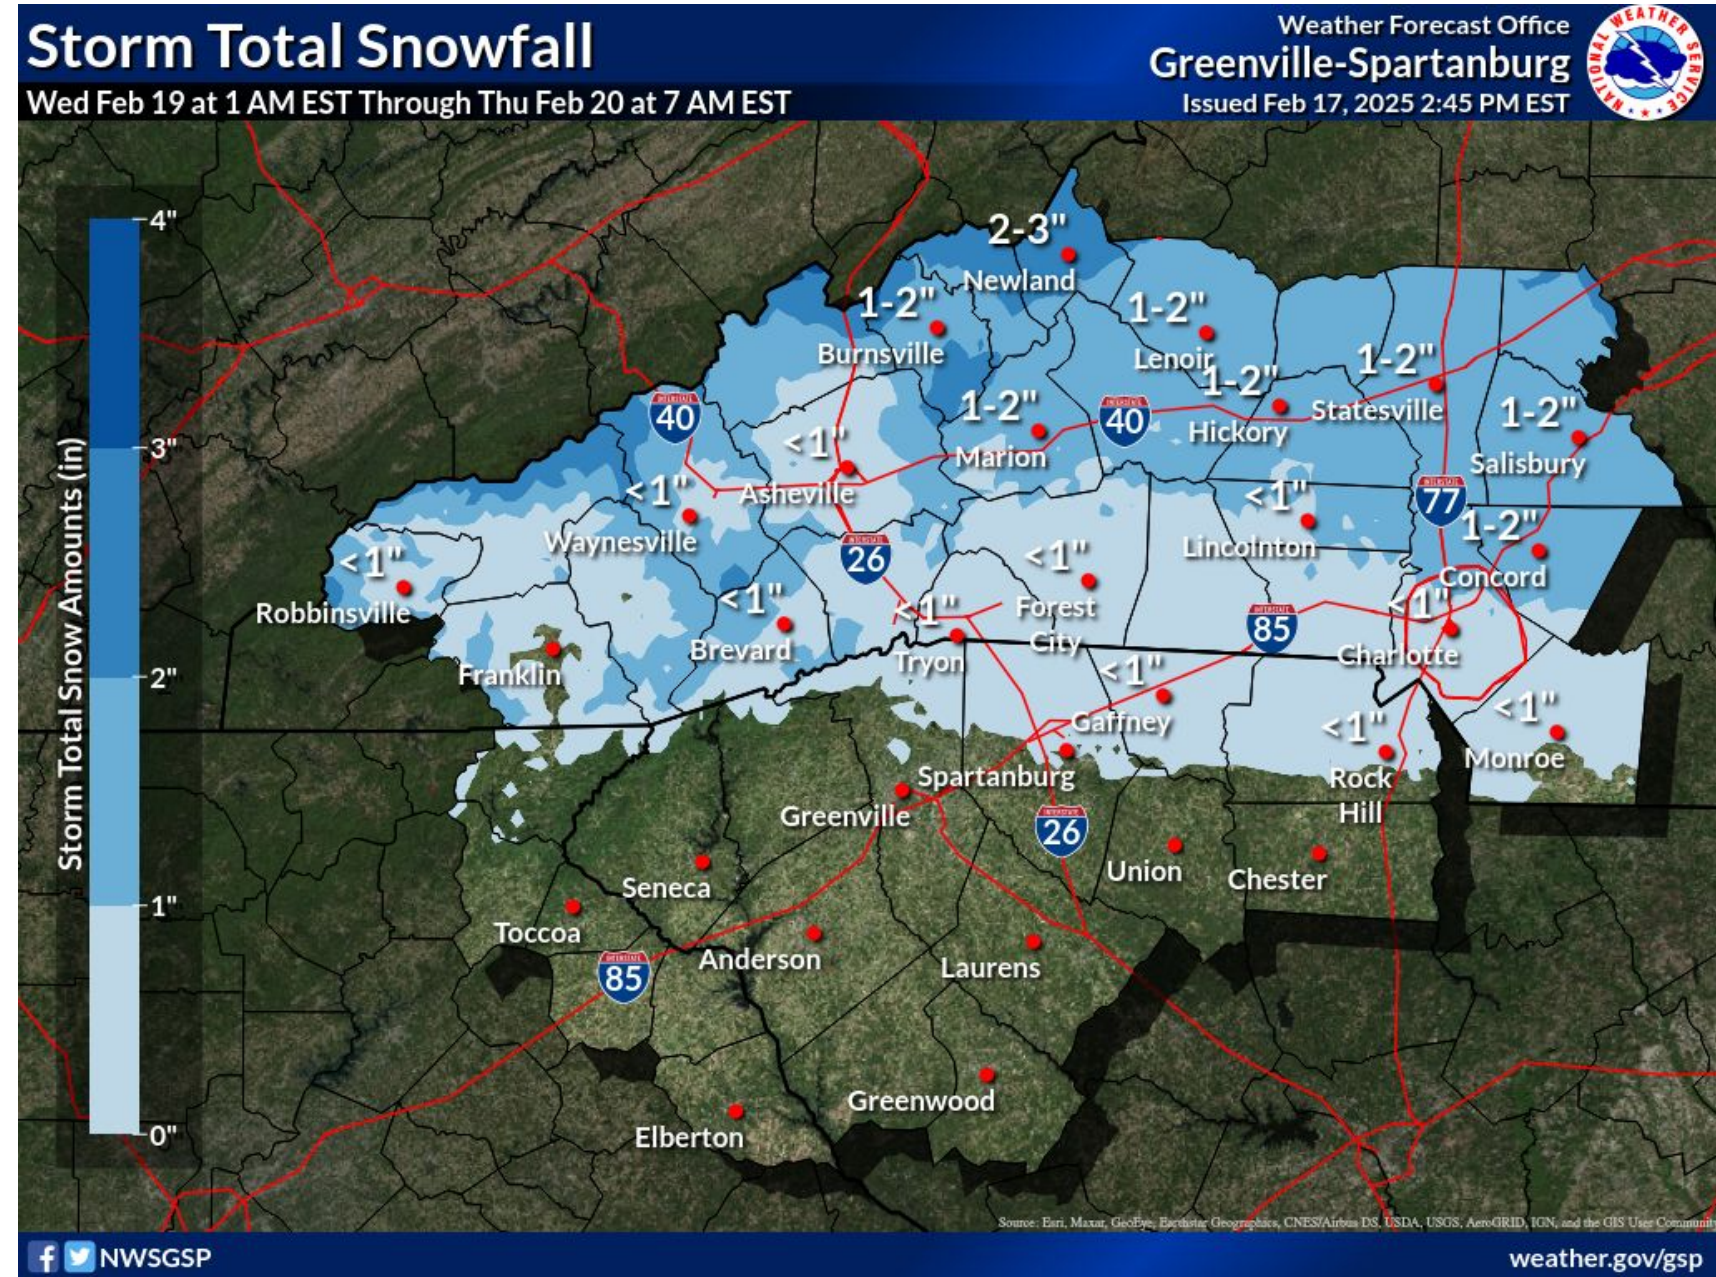

Possible Snow Amounts

February 17, 2025
5:41 PM

Wednesday Morning Through Daybreak Thursday

Hazard Details

- Precipitation should develop Wednesday morning as wet snow north of a line from Clayton, GA, to Greenville/Spartanburg and Rock Hill, to Monroe, NC.
- The trend on precipitation amounts is downward.
- Confidence is highest for mostly snow across the mountains, northern foothills, and northwest Piedmont. Sleet is expected to mix in across the southern foothills and Charlotte metro area. A rain/snow mix is expected across the northern Upstate and extreme northeast GA.
- The wintry precipitation should taper off to the mountains near the TN border by daybreak Thursday.
