

# Severe Storms Possible Today and Saturday

June 6, 2025  
3:26 PM

For the Western Carolinas and Northeast Georgia

## OVERVIEW

Severe storms are possible this afternoon and evening (level 1 of 5 threat) and again on Saturday (level 2 of 5 threat). **See slide 2 for Saturday's Severe risk.**

### TIMING

- During the afternoon and evening hours each day.

### HAZARDS & IMPACTS

- Damaging wind gusts are the primary threat with any severe storms that develop each day.

### NWS ALERTS

- None at this time.

### ADDITIONAL INFORMATION

- A line of storms will track across the area this evening into tonight but is expected to weaken as it pushes across the mountains (area circled in red). Thus, confidence on the severe weather threat outside the southwest North Carolina mountains remains very low.
- See slide 2 for additional information on Saturday's severe potential.

### POST-EVENT OUTLOOK

- The pattern remains unsettled through next week. A few strong to severe storms are possible each afternoon and evening, although there will be a brief lull in activity Monday.

### NEXT BRIEFING

- By 6 AM EDT Saturday, June 7th, 2025.

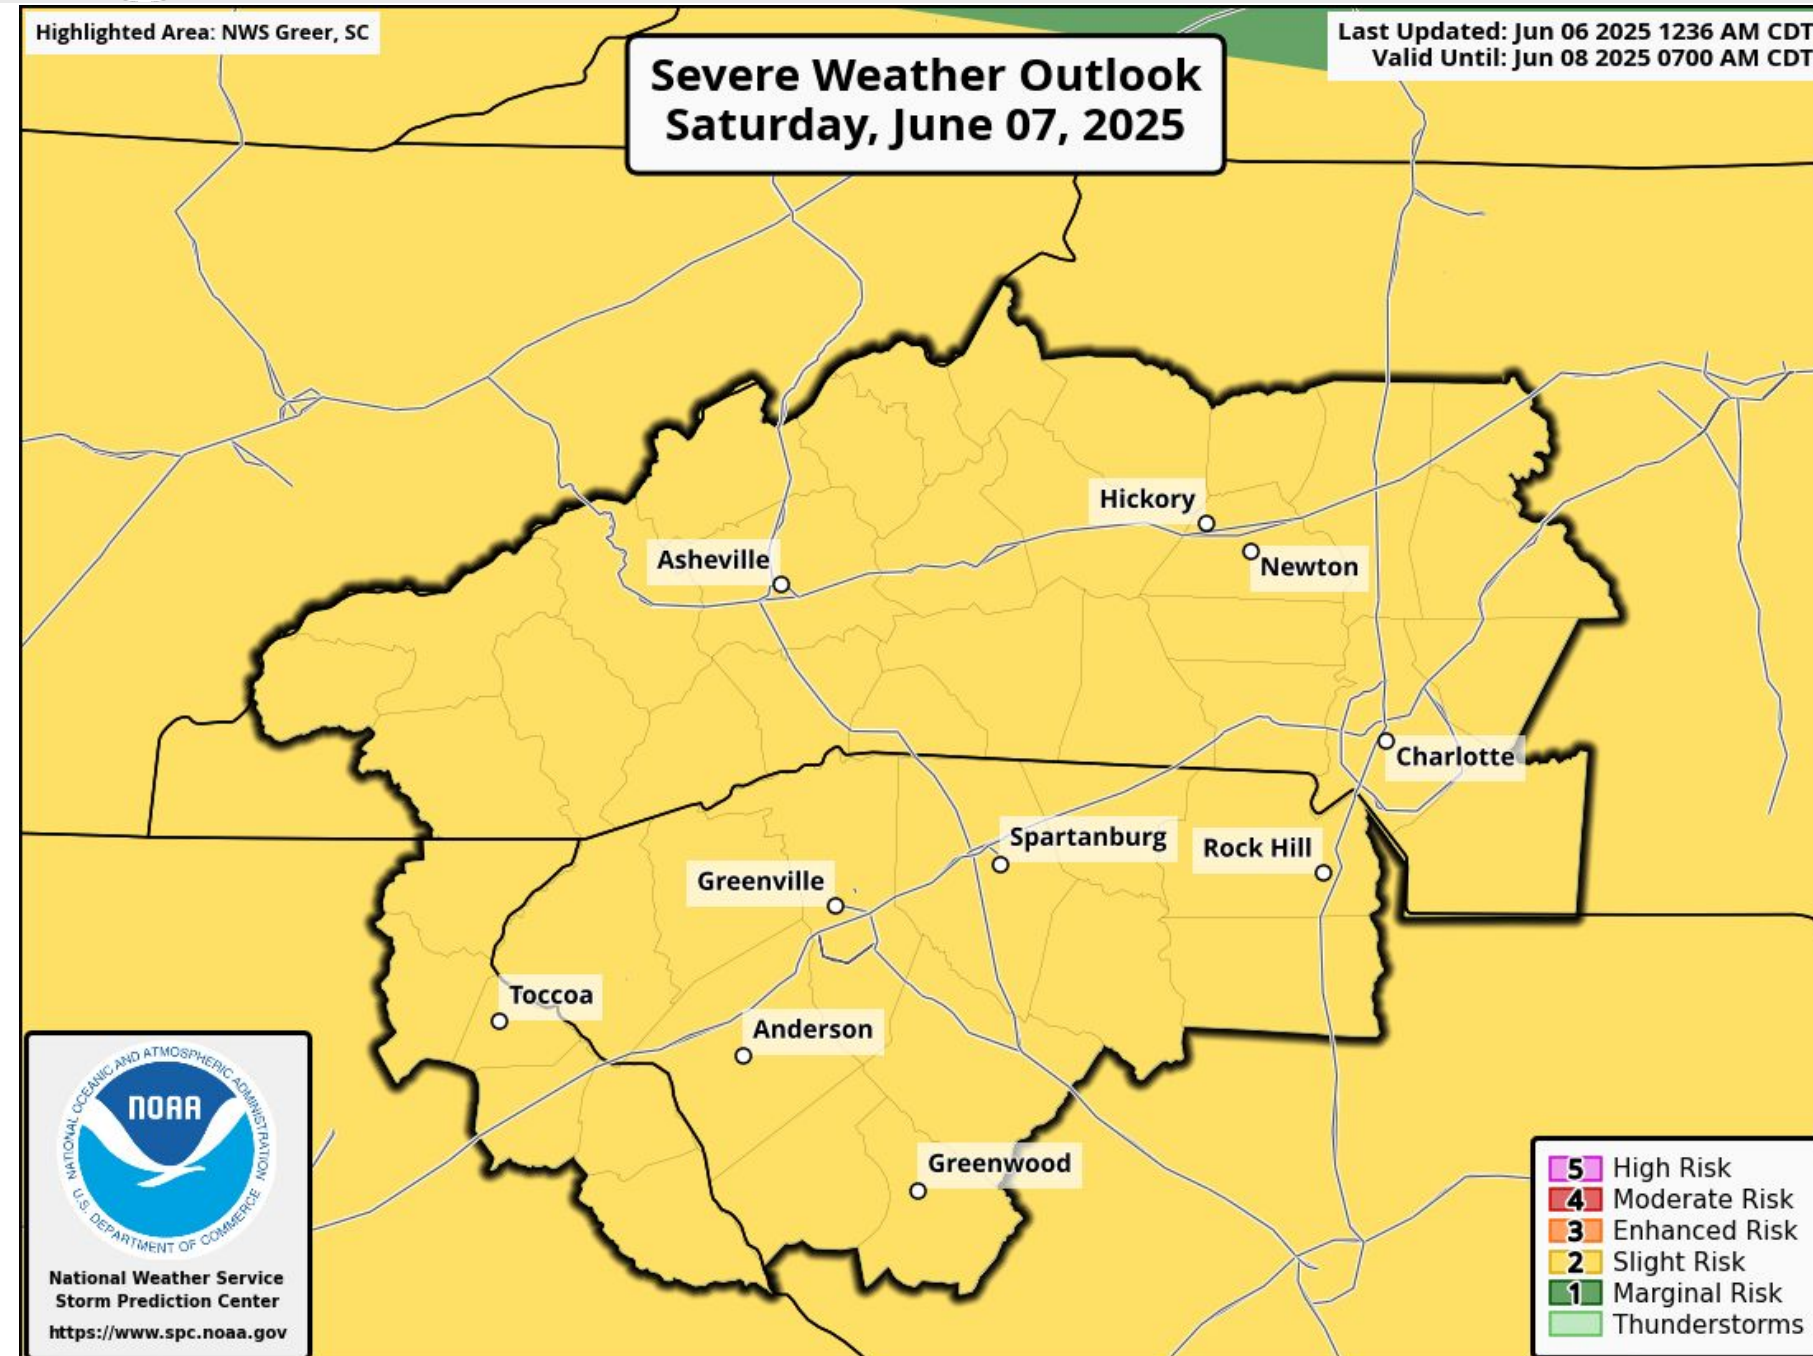

# Severe Storm Risk for Saturday

June 6, 2025  
3:26 PM

For the Western Carolinas and Northeast Georgia

**Confidence on the severe weather threat for Saturday has decreased.**

A few strong to severe storms are possible Saturday afternoon and evening but **confidence is low.**

Another line of storms will approach the forecast area Saturday evening into Saturday night but once again a weakening trend is likely as activity pushes east so **confidence remains low.**
