

Winter Weather Briefing

December 1, 2025

3:50 AM

Decision Support Briefing #5 for the Western Carolinas and Northeast Georgia

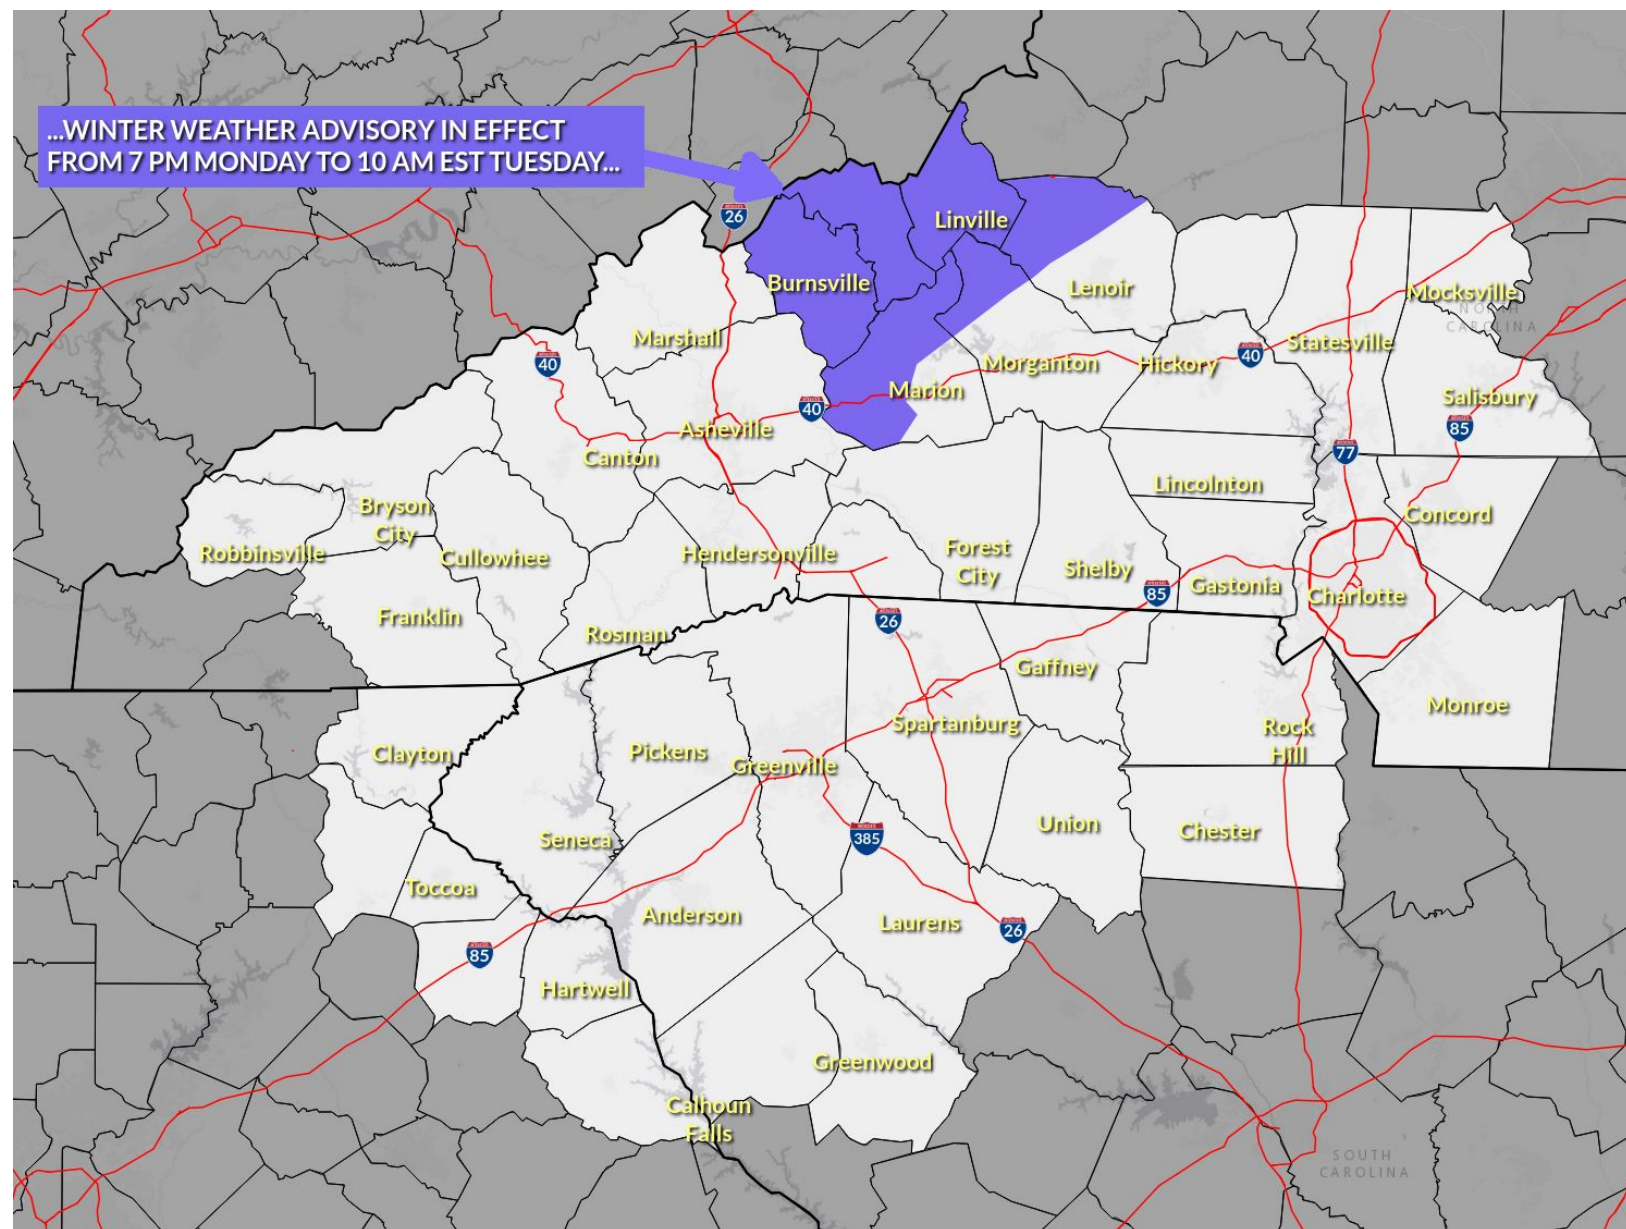

NEW

Important Updates

- Winter Weather Advisory issued for the northern NC Mountains/Foothills, valid 7 PM this evening to 10 AM Tuesday

Key Messages

- Another wintry precipitation event will occur tonight into early Tuesday morning across the northern North Carolina mountains.

National Oceanic and
Atmospheric Administration
U.S. Department of Commerce

National Weather Service
Greenville-Spartanburg, SC

Forecast Ice Totals

Northern NC Mountains

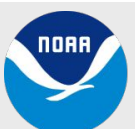

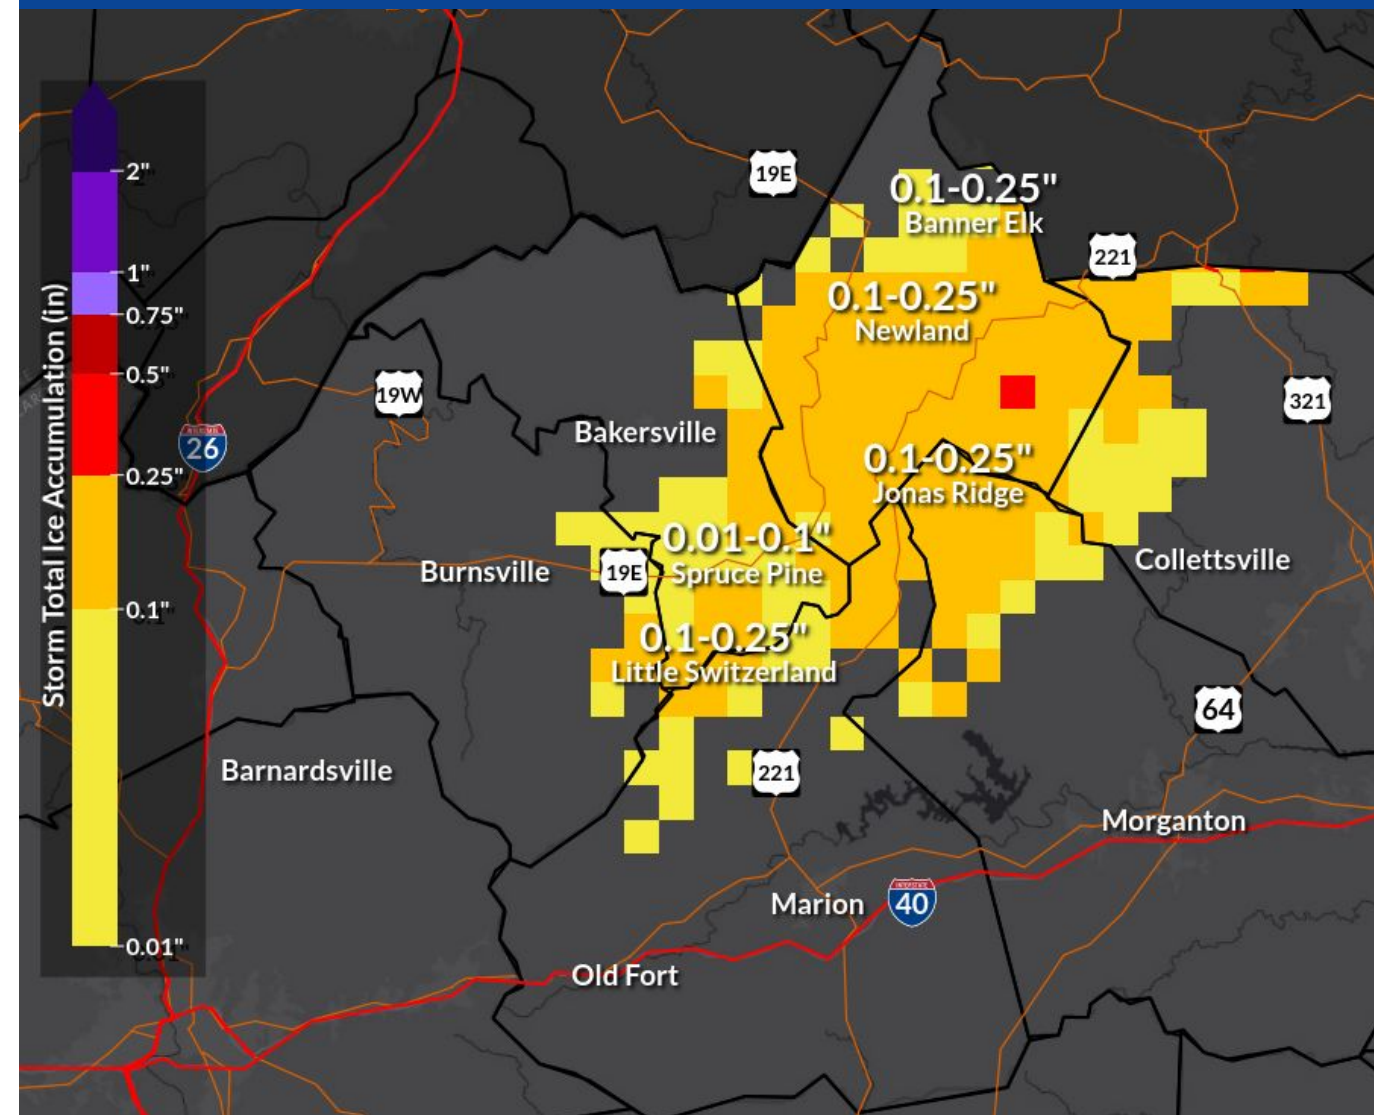

December 1, 2025

3:50 AM

Details

- Most areas outside the northern North Carolina mountains should see all rain for the duration of the event, aside from some sleet possibly mixing in at the onset of precipitation tonight (but with no accumulation).
- Freezing rain is the most likely precipitation type wherever temperatures are below freezing. However, sleet and/or snow may mix in at times.
- A trace of ice accumulation is possible in very high elevations of the southern NC mountains (not shown).

Storm Total Ice Forecast - 7 PM Mon - 7 AM Tue

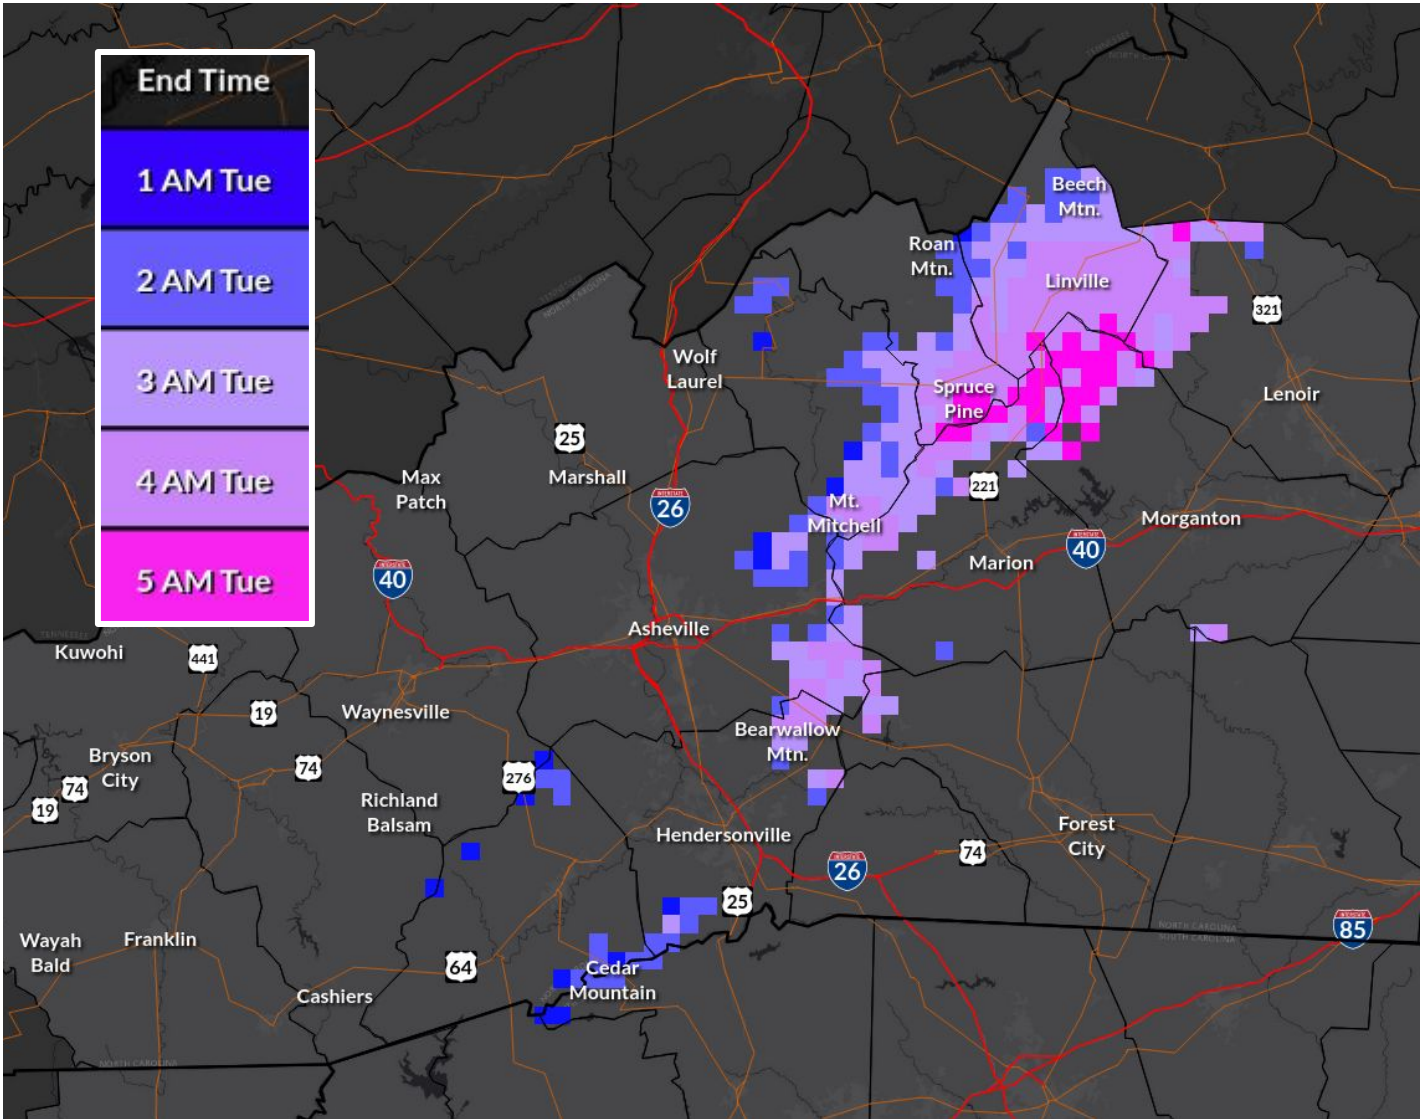

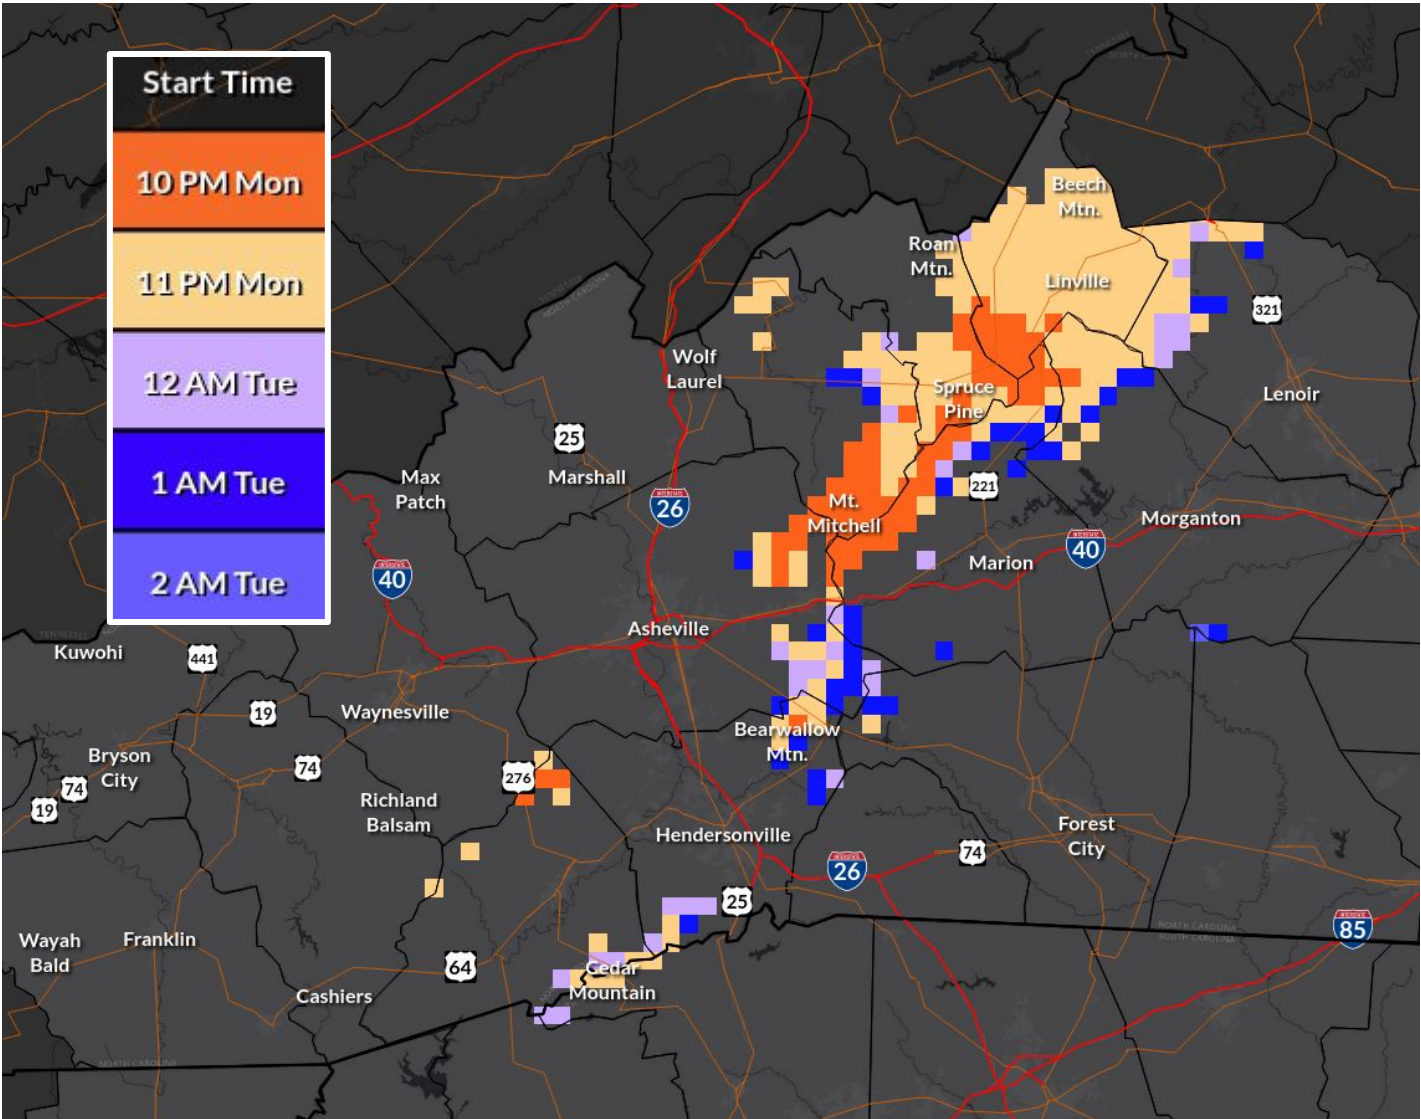

Precipitation Type Timing

For selected North Carolina mountain locations

December 1, 2025
3:50 AM

Precipitation develops after 7 PM this evening and will spread generally southwest to northeast across the area through early morning. The most likely time ice will begin to accumulate is shown above.

Freezing rain should end as temperatures warm toward daybreak, changing over to rain in all areas by 5-6 AM. Once it is clear road conditions are no longer being impacted, the Advisory could be cancelled early.
