

Winter Weather Briefing

January 22, 2026
2:47 AM

Decision Support Briefing #4 for the western Carolinas and northeast Georgia

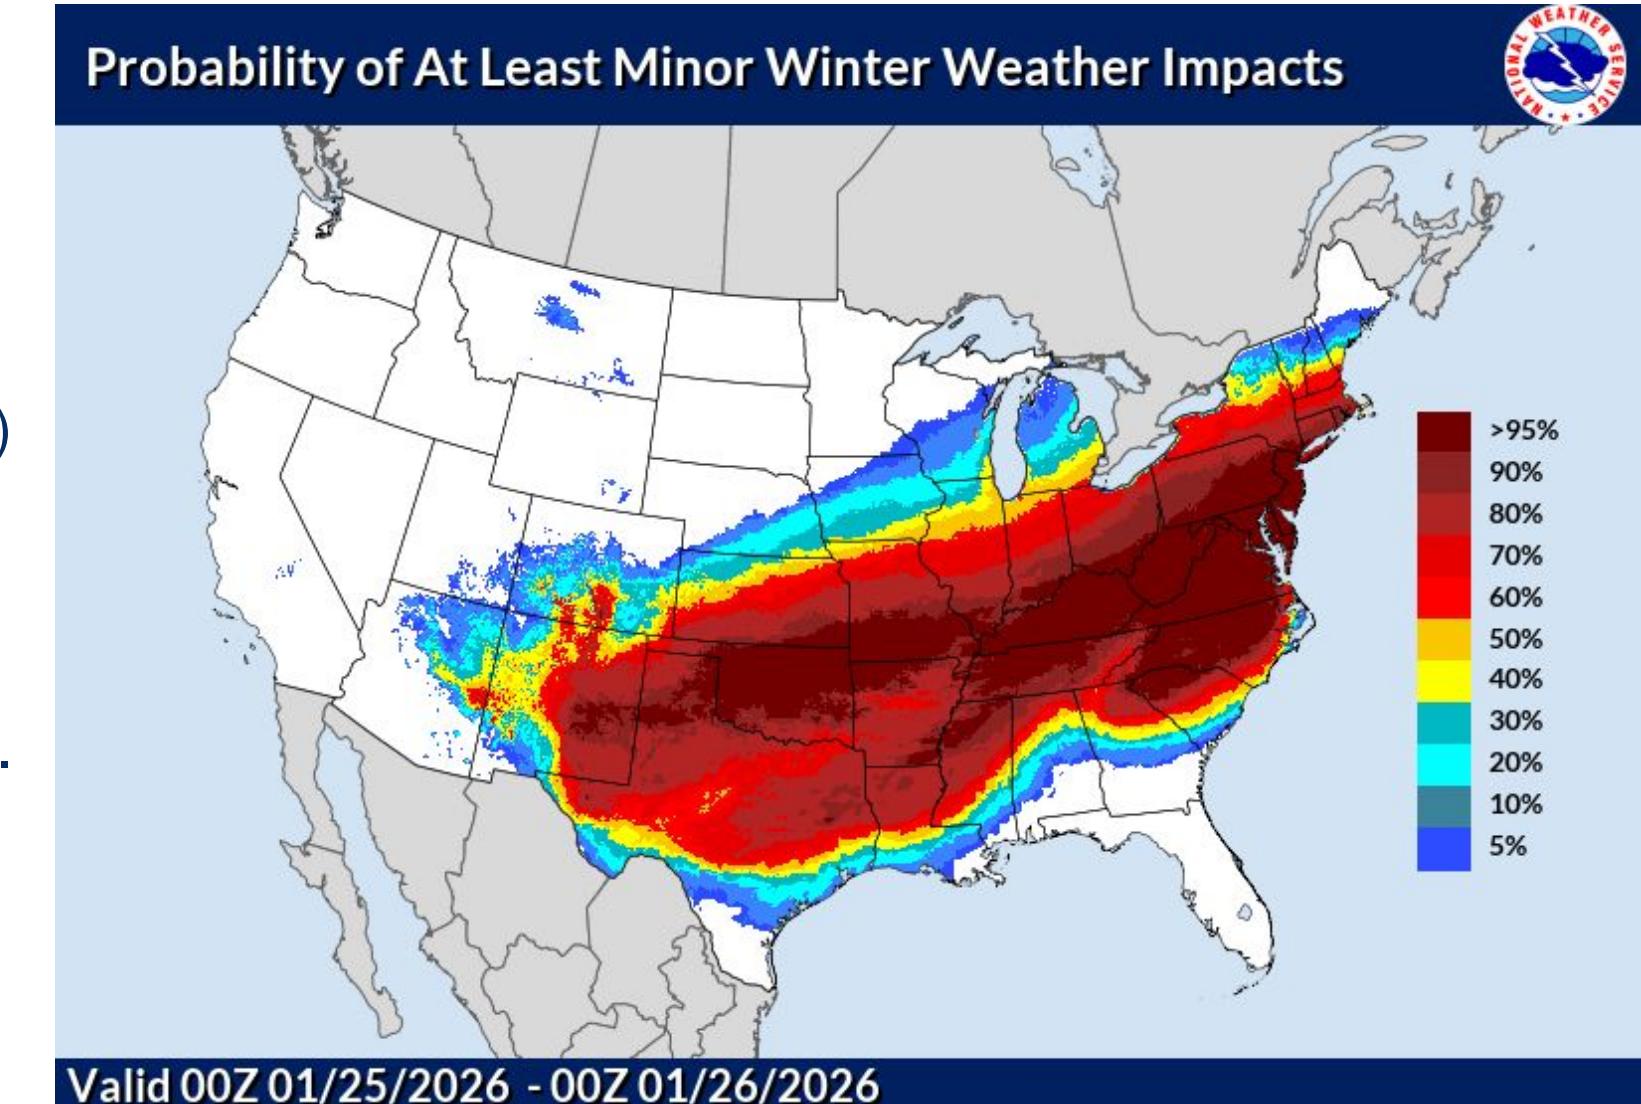

NEW

Important Updates

- **Winter Storm Watch in effect for the entire forecast area, 7 AM Saturday to 1 PM Monday.**
- Forecast has trended toward greater impacts from ice/sleet and less impact from snow.
- Next webinar scheduled for **4 PM Thursday, January 22, 2026.** (Link to register on last page.)

Key Messages

- A major winter storm system is set to impact the entire area this weekend. Specific forecast amounts of ice, sleet, and snow remain uncertain.
- Frigid temperatures next week could extend the threat for hazardous travel and impacts from power outages.

Winter Storm Watch

For the entire NWS GSP area

January 22, 2026
2:47 AM

Key Messages

- A Winter Storm Watch remains in effect for the entire area from 7 AM Saturday through 1 PM Monday.
- Expected impacts include:
 - ◆ Significant ice accumulation on power lines and tree limbs, causing widespread and long-lasting power outages.
 - ◆ Impassable and treacherous ice and snow covered roadways lasting into the beginning of next week.
- Consider delaying all travel until after road conditions improve.
- Upgrades to Winter Storm Warning or Winter Wx Advisory are not likely until Thursday afternoon at the soonest.

Atmospheric Administration
U.S. Department of Commerce

National Weather Service
Greenville-Spartanburg, SC

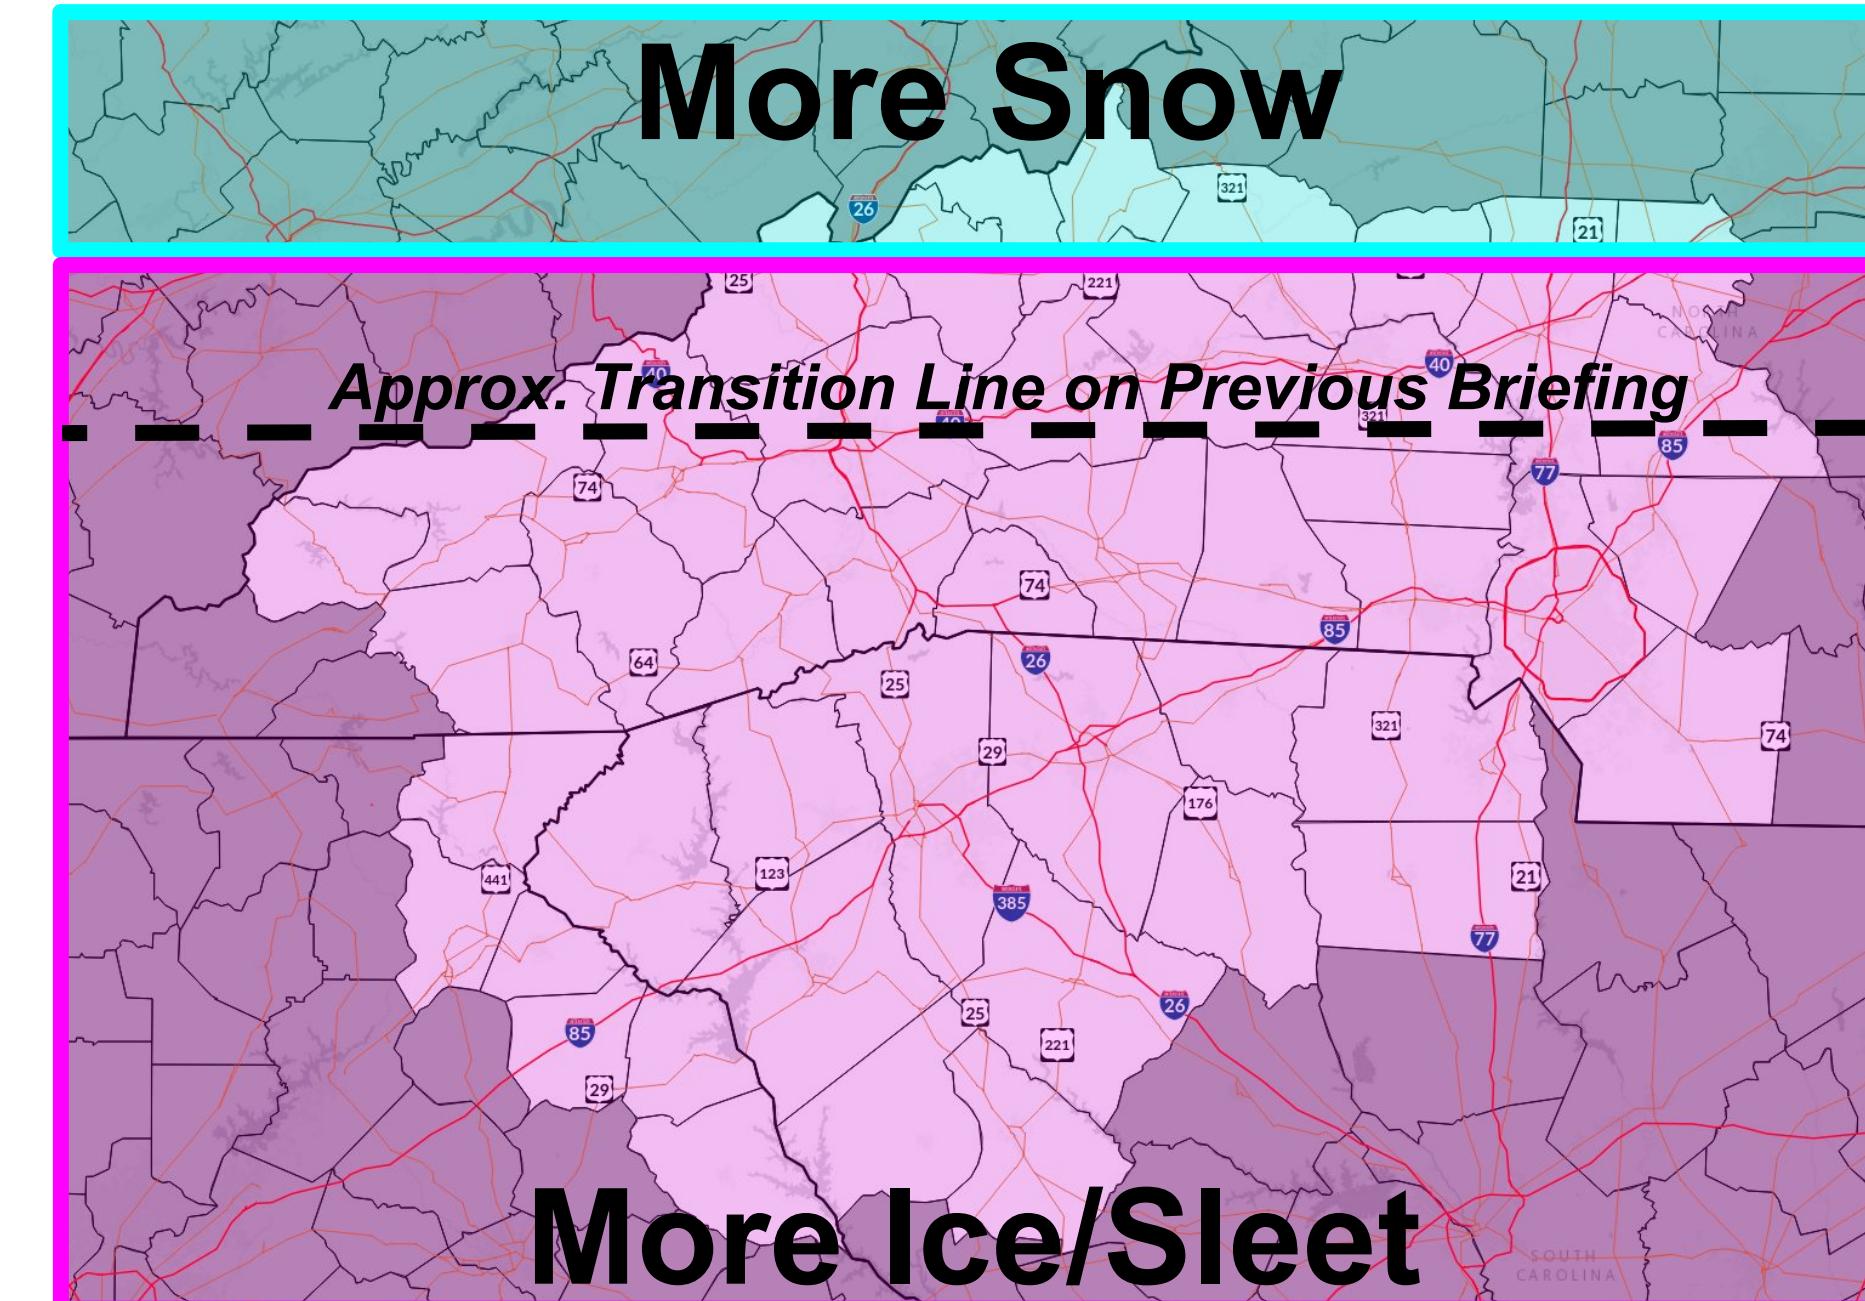

Precipitation Type Challenges

January 22, 2026
2:47 AM

Confidence remains relatively low as to amounts of snow vs. sleet vs. ice

Forecast Challenge

- Accumulations are highly dependent on where the transition zone occurs from snow to ice/sleet.
- Weather model trends continue to point to a **shift northward** with greater snow amounts north of I-40. This means the greater amounts of ice/sleet are now south of I-40.
- *This transition line **will continue to change** as the event gets closer and **will determine final precip accumulations.***
- See accumulation probabilities on the next two pages.

National Oceanic and
Atmospheric Administration
U.S. Department of Commerce

National Weather Service
Greenville-Spartanburg, SC

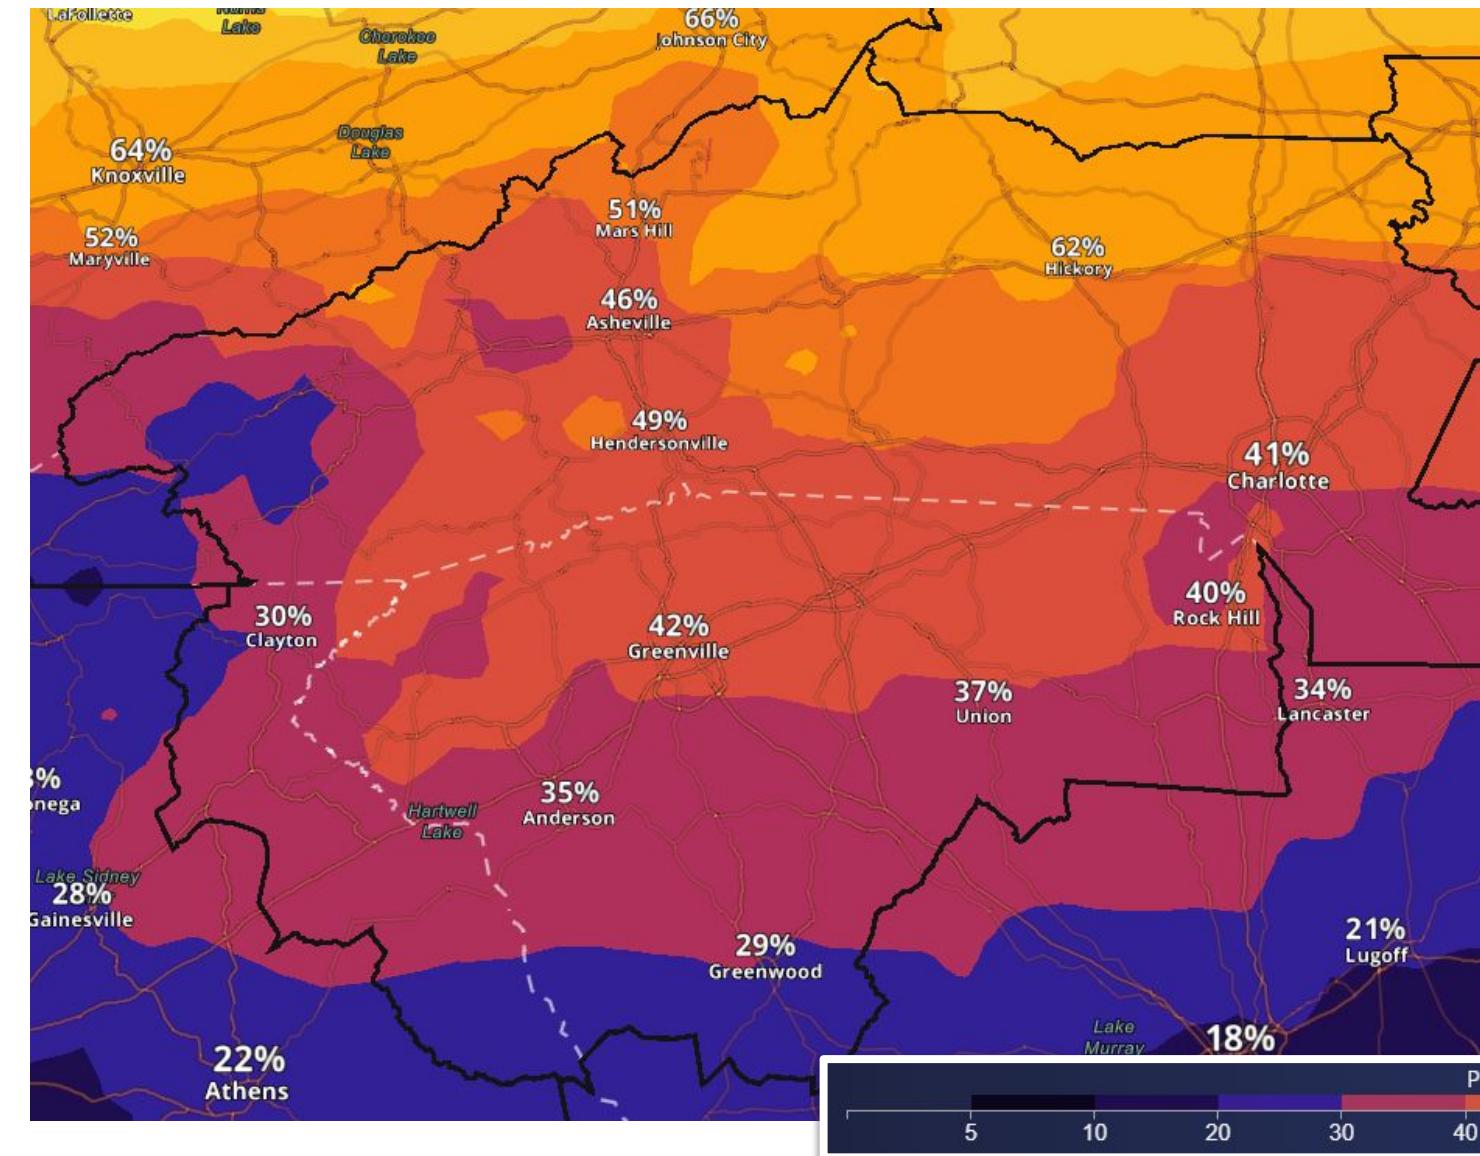

Accumulation Probabilities

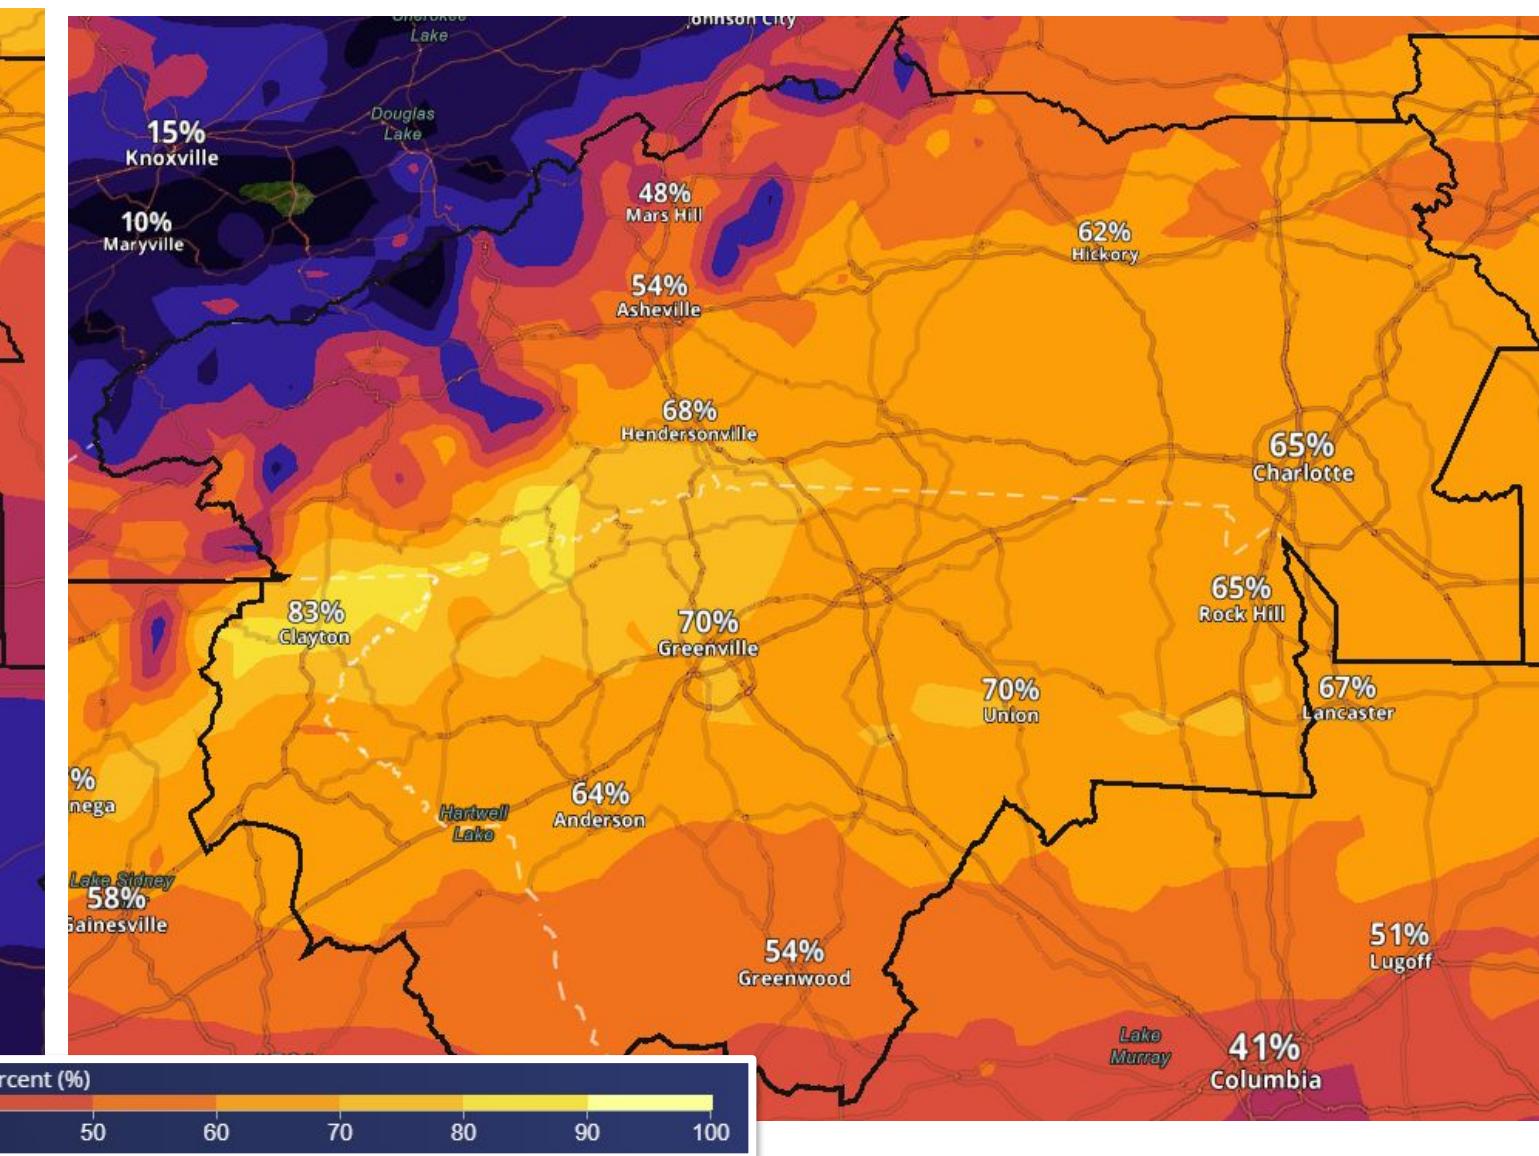

January 22, 2026
2:47 AM

Over the 48 hour period between 7 AM Saturday and 7 AM Monday

Likelihood of **1 inch** of snow/sleet or greater

Likelihood of **0.25 inch** of ice accumulation or greater

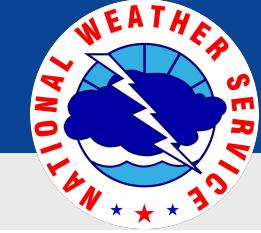

Not an official forecast: The above images are a numeric representation of our confidence that these thresholds will be reached.
For locations outside the NWS GSP service area, consult the local NWS office's briefings or forecasts.

Accumulation Probabilities

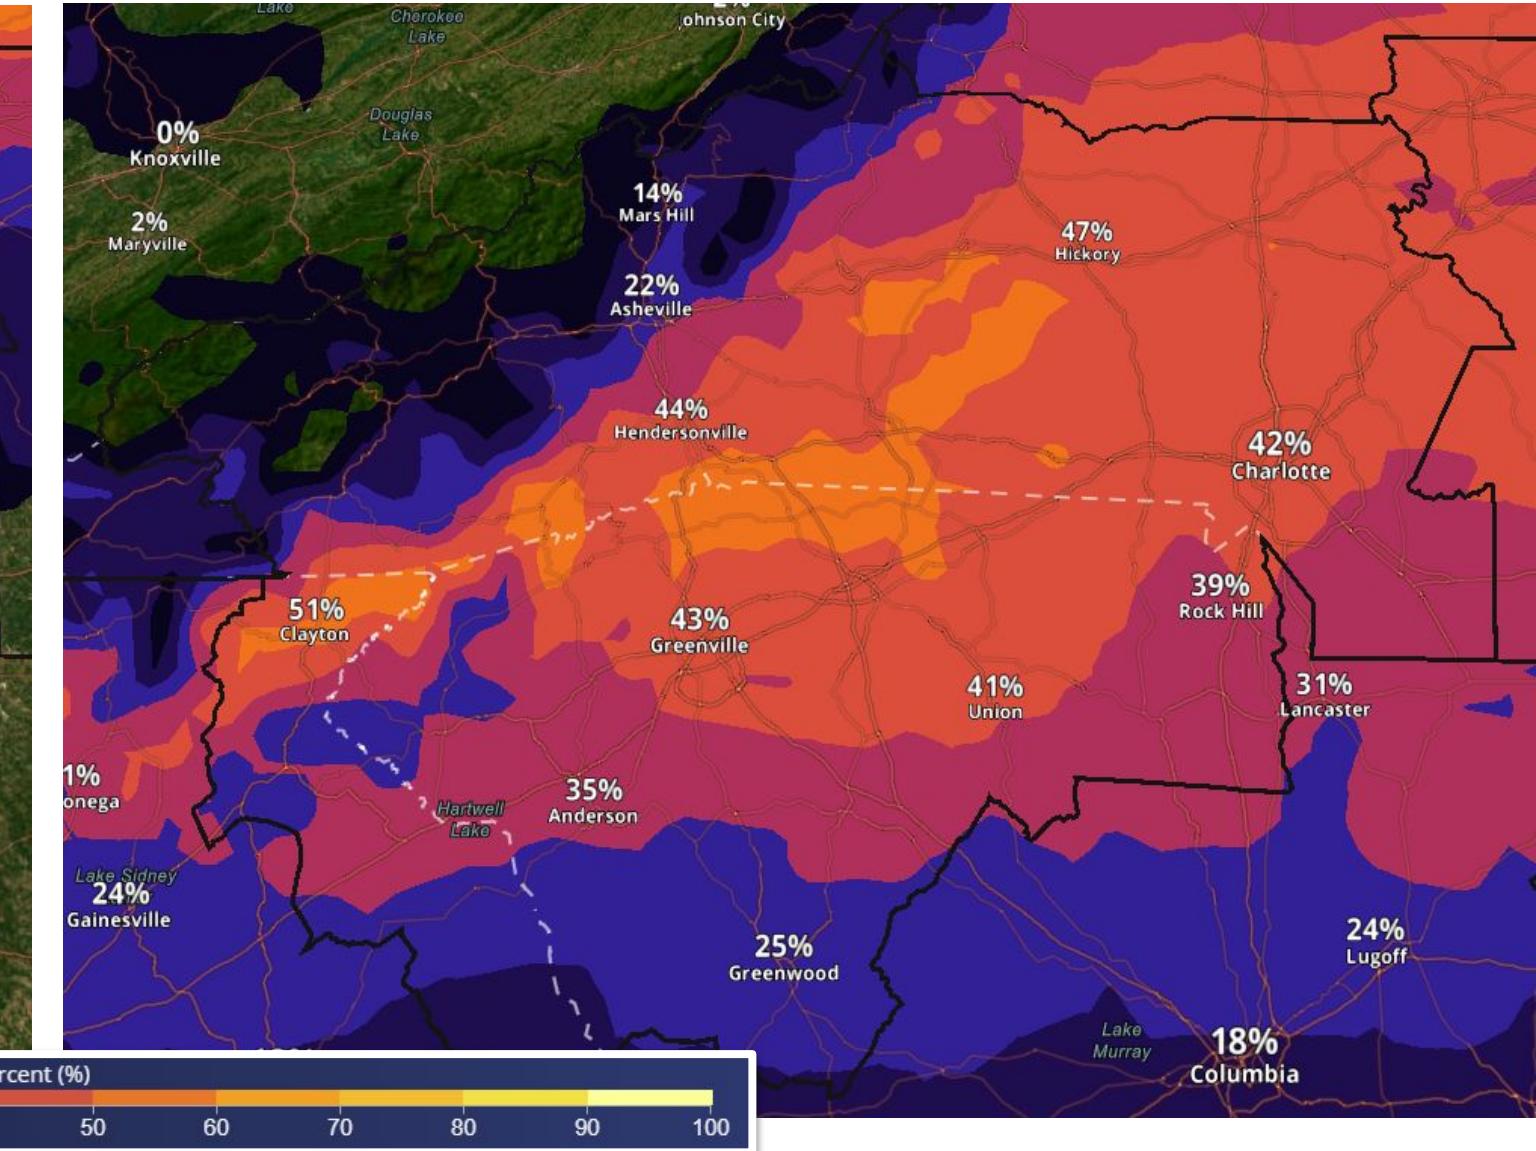

January 22, 2026
2:47 AM

Over the 48 hour period between 7 AM Saturday and 7 AM Monday

Likelihood of **4 inches** of snow/sleet or greater

Likelihood of **0.50 inch** of ice accumulation or greater

Not an official forecast: The above images are a numeric representation of our confidence that these thresholds will be reached.
For locations outside the NWS GSP service area, consult the local NWS office's briefings or forecasts.

Most Likely Timing of Winter Precip. Onset

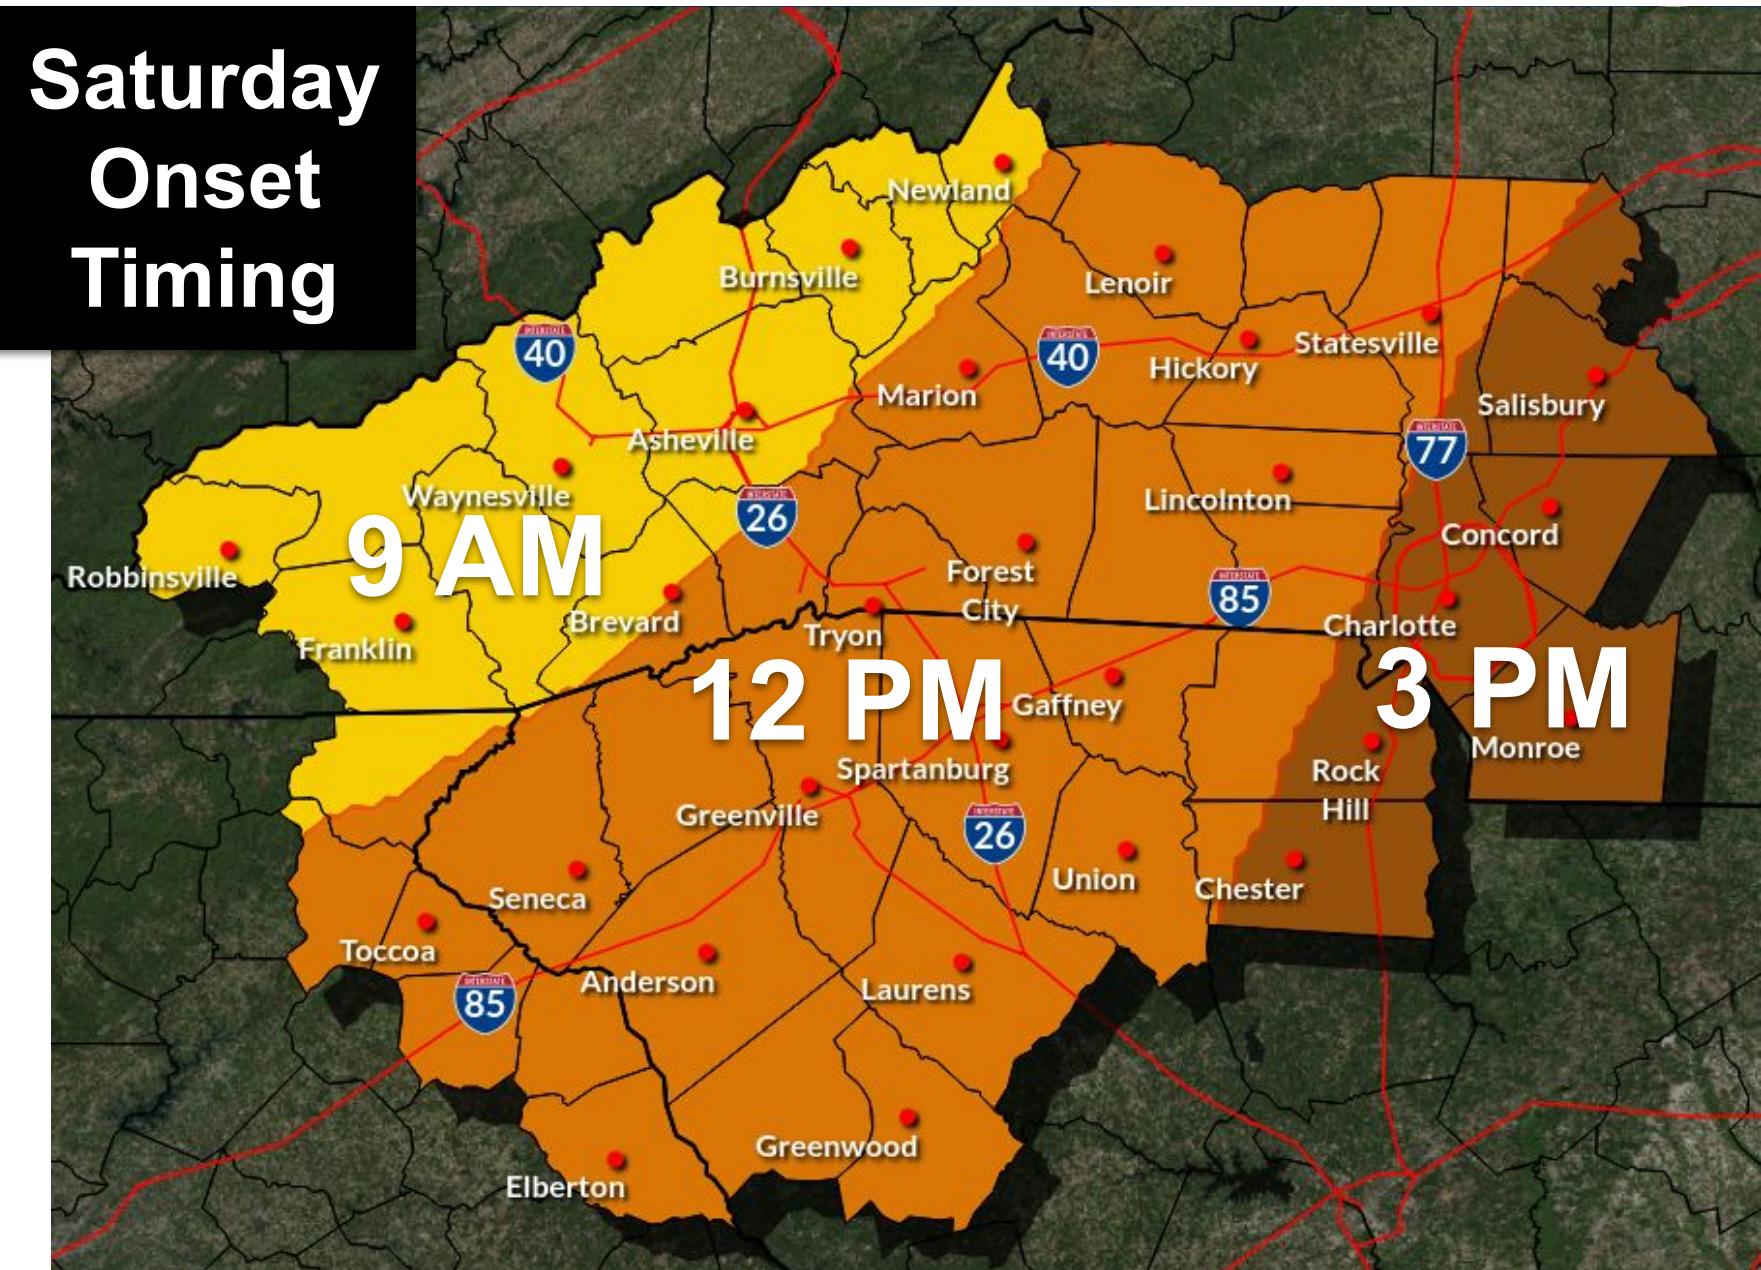

January 22, 2026
2:47 AM

SUBJECT TO CHANGE

Hazard Details

- Timing (at right) is based on when chance of *wintry precip* rises above 50% in our official forecast. For most areas, precip will begin as a wintry mix.
- ***The main period of precip could begin earlier or later depending on where the system tracks over the next few days.***
- The best overall chances of wintry precip, and the fastest rates of accumulation, are Saturday night through Sunday morning (at this time).
- Weather models have shifted the onset to a later time on Saturday. With the evolving system, this timing should be considered subject to change.

Most Likely End Timing of Wintry Mix

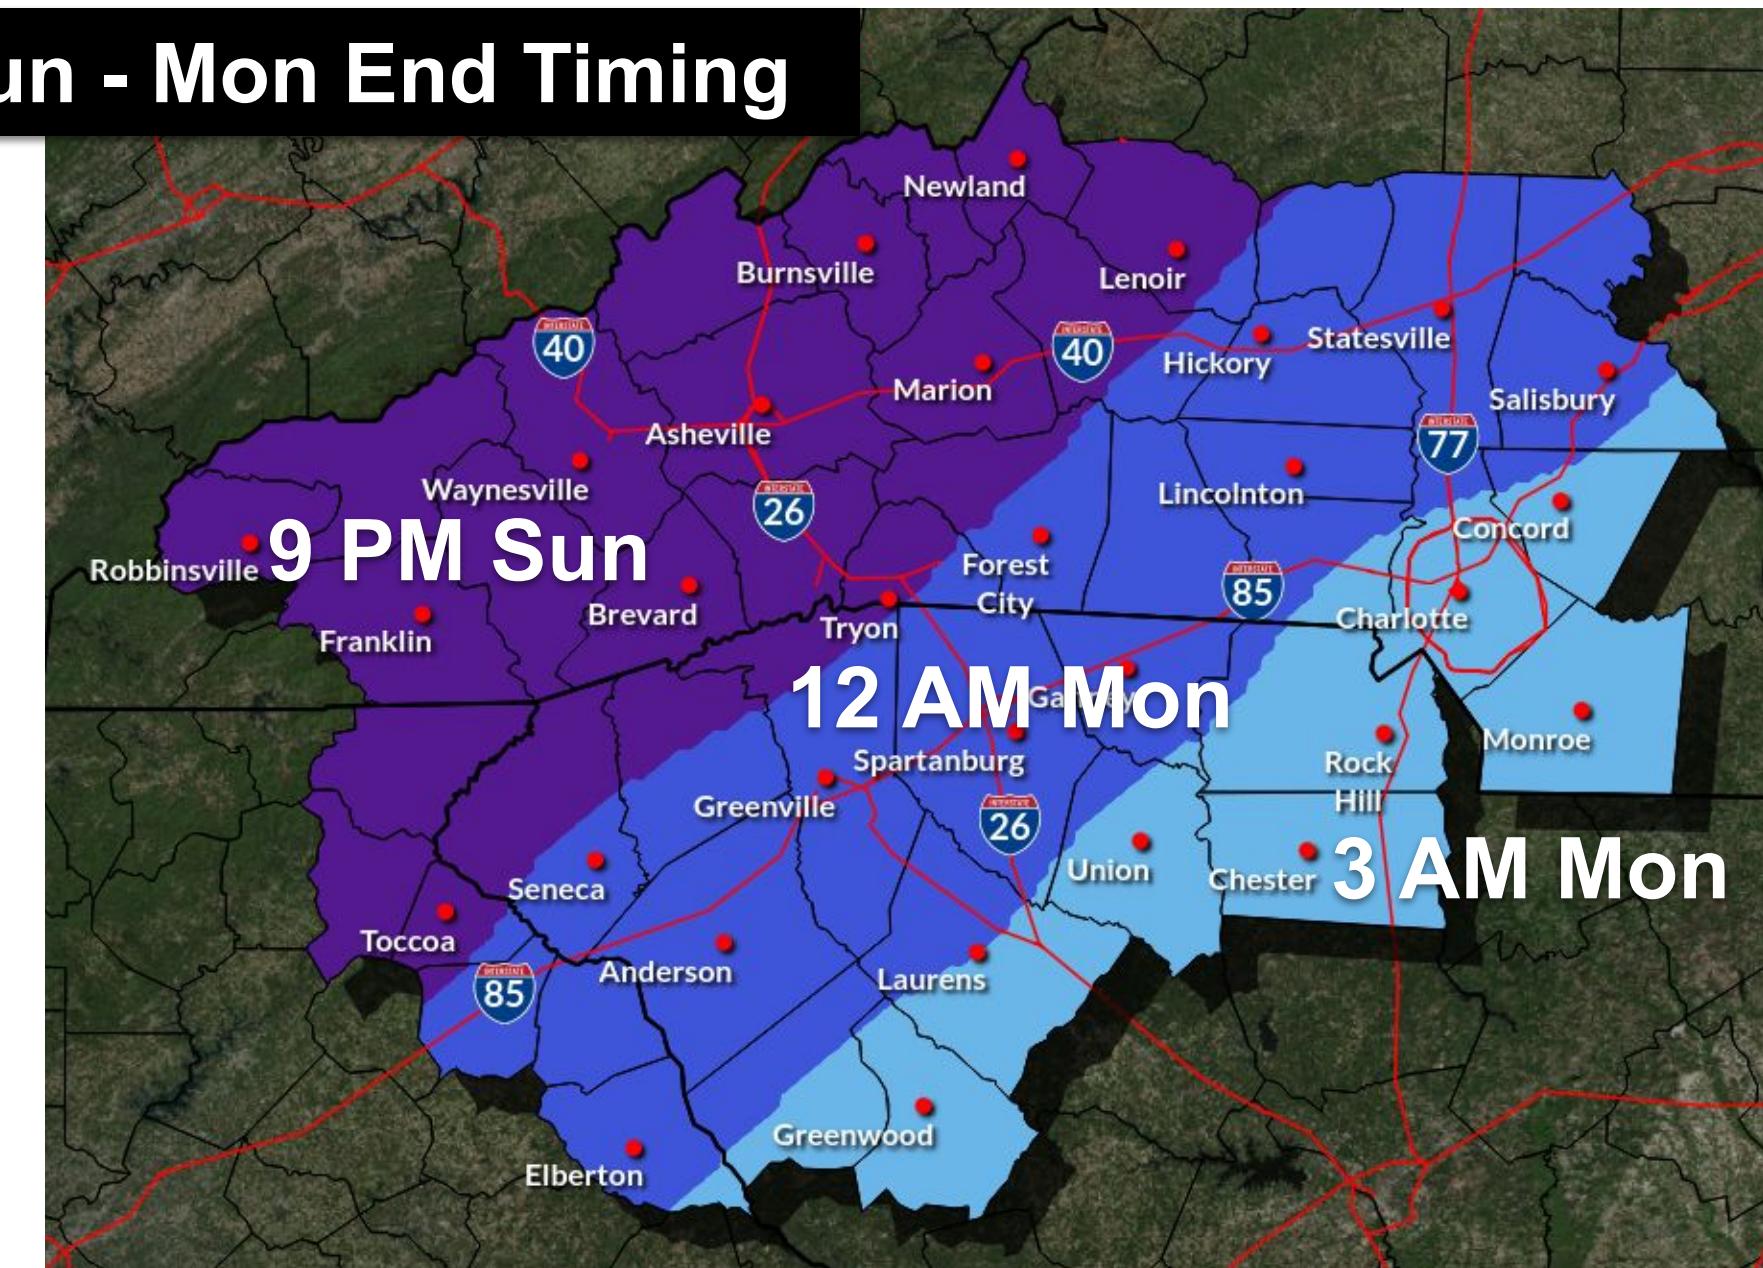

January 22, 2026
2:47 AM

SUBJECT TO CHANGE

Hazard Details

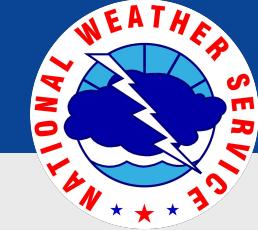

- End timing (at right) is based on when chance of snow, sleet **and/or** freezing rain drops below 50% in our official forecast.
- ***The main period of precip could end earlier or later depending on where the system tracks over the next few days.***
- Temperatures may warm enough for precip to change to rain for a time late Sunday in northeast GA and areas outside the mountains that are west of I-26. Confidence on this change over are low at this point.

Cold Outlook for Next Week

January 22, 2026
2:47 AM

Temperatures likely to remain below normal Monday-Thursday

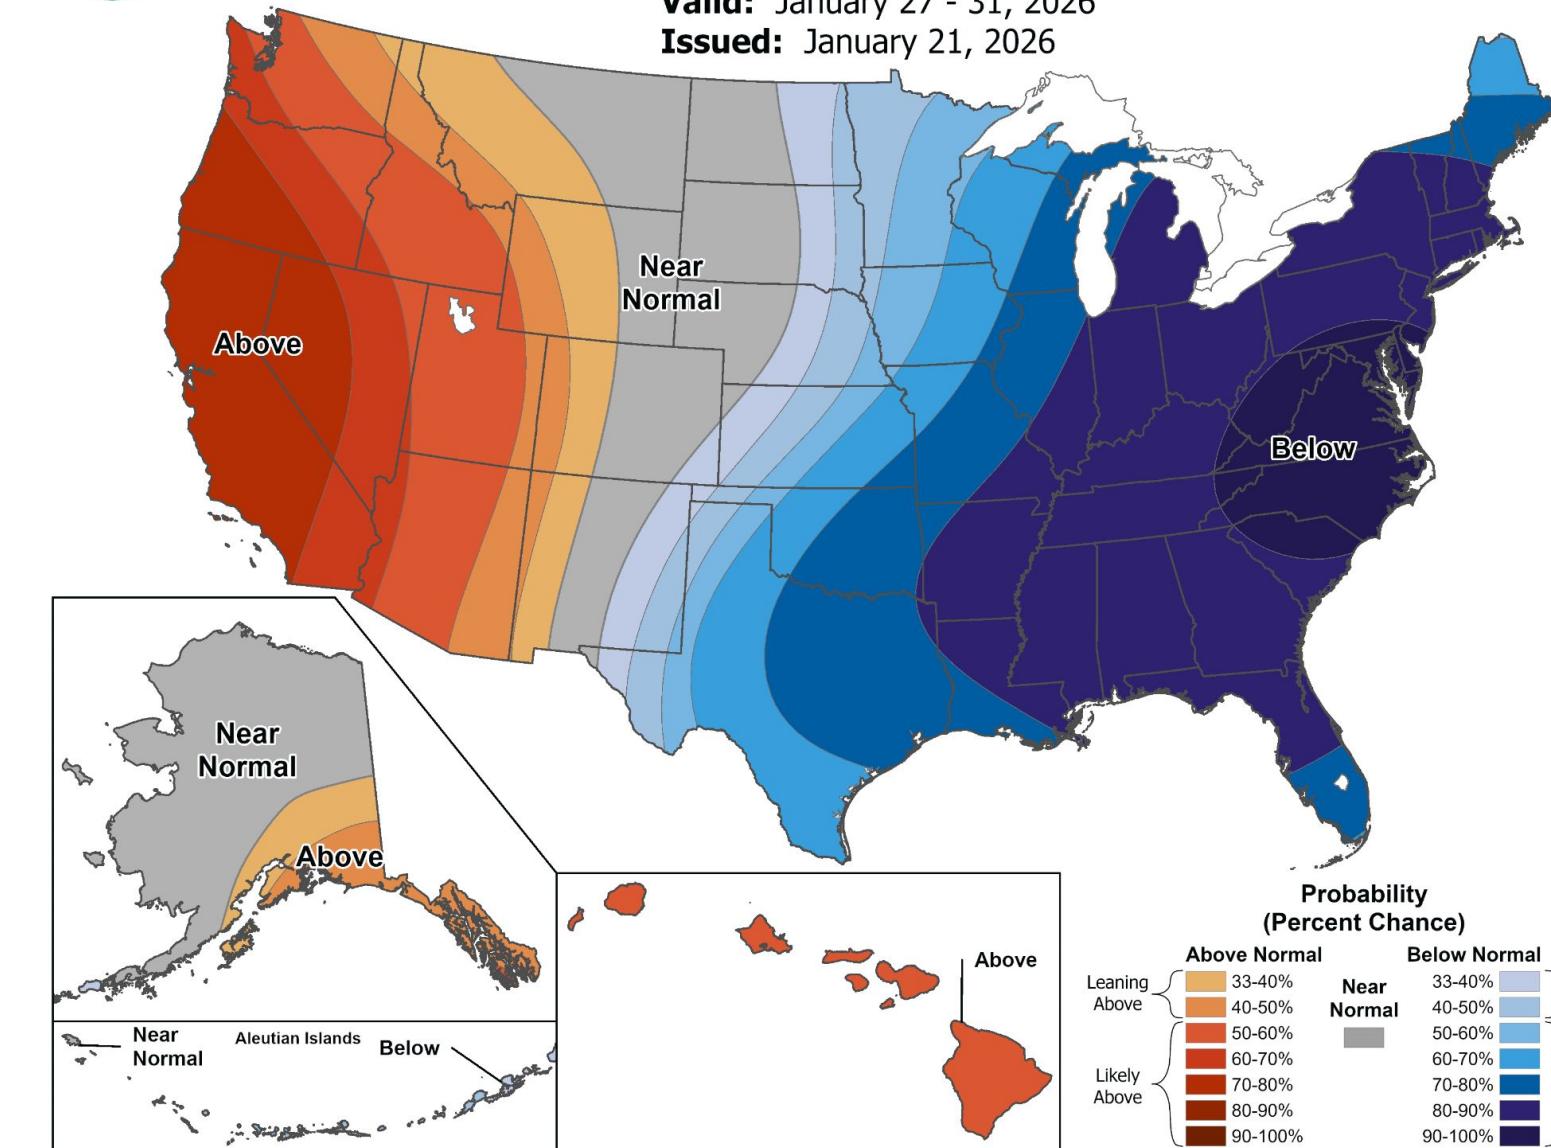

Post-Event Outlook

- Confidence is increasing that dangerously cold wind chills may develop Monday night into Tuesday morning, which could result in hypothermia or frostbite for those exposed to the elements.
- Snow and ice are likely to linger through early next week due to cold temperatures.
- Recovery, in terms of repairing any power outages or clearing roads, could be slower than usual.

6-10 Day Temperature Outlook
