WELCOME to

TOTAL Performance

Revved up about the 2025 Offering!

We've been building up speed for 75 years in the Hereford business for such a time as this, our 65th Consecutive Annual Sale. **Total Performance** is not just for race cars. **Total Performance** is the chassis we've built our program on since the beginning. Tegtmeier genetics are designed with balance in mind. Performance testing and carcass data collection for three decades guarantee that you are getting the total package in calving ease, growth, maternal and carcass traits. We've included docility, udder quality, soundness and fleshing ability too -- everything you need for trouble-free profitability and a fast track to superior genetics.

About that race car with Tegtmeier Polled Herefords front and center. This past year, we sponsored driver Shawn Hein in his sport mod. While a Hereford breeder may not be the typical kind of sponsor one would find painted on a race car, we think it's rather fitting.

We have cow families supercharged with femininity, fertility and longevity, so they won't spin out early! These Tegtmeier females sport a ton of COWpower under the hood to inject plenty of milk, muscle, and meat. As for the Tegtmeier bulls, we've souped up the genetics with built-in moderate birth weights known to accelerate growth from the day they drop till they cross the finish line. To negate the risk of hairpin curves in the market, look for lots designated by the CHB logo denoted for producing feeder cattle that will excel in the economically relevant traits of gain, feed efficiency, and carcass merit, when mated to Angus cows. Watch for the first round of calves by Momentum, the best son to date of the extremely popular Vanguard from MGM. His performance shines through outstanding EPDs with 11 traits in the top 10%. BMI\$ index is in the top 1%, with outstanding udders on both sides of his pedigree. Here's the "Momentum" you've been looking for to produce balanced, stylish, and high performing progeny.

We are delighted to continue building Total Performance Polled Hereford genetics with GE-EPDs and 75 years of dedication behind them. Rest assured that when the flag drops, Tegtmeier Polled Hereford customers are racing with the finest. We hope you can sit in the stands to hear the roar, but if you tune in from home, be sure to register with [LiveAuctions.TV](https://www.liveauctions.tv) to bid online. You'll find all the details on the sales term page included in this catalog. Whether you join us online or plan to be ring side, feel free to stop by any time to see the cattle.

Mark your calendar for Friday, Feb. 21, to view the field and grab a bite to eat. Then it's "Boogity, boogity, boogity" to the farm on Saturday, Feb. 22.

Gentlemen, and Ladies...Start Your Engines!
It's Sale Day!

Sincerely,
Russ Tegtmeier

Sale Terms and Conditions

1. Terms — Cash or Check. Each animal to be sold to the highest bidder. The auctioneer shall settle any dispute as to bids.
2. All cattle are to be paid for by the purchaser during or immediately after the sale unless other arrangements have been made prior to the sale.
3. Each animal will be the purchaser's risk immediately after the animal is sold. They will be fed and cared for free of charge for a reasonable length of time after the sale but at the purchaser's risk.
4. All cattle will be sold in compliance with the health laws of the state of Nebraska.
5. Breeding Guarantee — All bulls and females are guaranteed to be breeders if given proper care. Heifers pronounced safe in calf by the veterinarian shall be considered breeders without any further guarantee. Any animal failing to breed within five months may be returned to the seller if in as good condition as when sold. The seller reserves the right to try said animal for five months. If the animal proves to be a breeder, the owner gets the bull at his expense. If it fails to be a breeder, an exchange will be made or his money returned.
6. All persons who attend the sale do so at their own risk. Owner assumes no liability, legal or otherwise, for any accidents which may occur.
7. Bids may be sent to any of the sale staff.
8. Please be assured if you buy cattle we will take care of them for a reasonable length of time, especially where long distance travel is involved.
9. Owner reserves the right to make additions or withdraw any cataloged entries if they fail to meet our standards at sale time.
10. Announcements at the sale ring concerning the cattle will take precedence over statements in the catalog.

Bull Breeding Guarantee:

The bulls in this sale are guaranteed breeders. Semen evaluations, health reports, and all claims must be submitted in writing to seller within six months of the sale date at buyer's expense from a veterinarian. Seller shall have the privilege of trying the bull after return before any adjustments are made. Guarantee is void if evidence of improper management in caring for the animal or the bull's inability to breed is due to sickness or injury incurred after bull is sold.

- High selling bull and Champion Bull at the 2023 Iowa Beef Expo.
- Momentum is the best son to date of the extremely popular Vanguard from MGM. He goes back to two great donor dams. Performance shines through his outstanding EPDs which have 10 traits in the top 10%. Actual BW 79 lbs. and a 205-day WW 709 lbs. to ratio 109. His 12-month adj. REA by ultrasound is 14.35. IMF is 4.63 which ratio as 105 and 103 respectively against Vanguard siblings. EPD carcass traits are all near top of the breed with REA 0.94 and MARB 0.74. His CHB index is \$218, putting all three of these traits in the top 1-2%. BMI\$ index is in the top 1%, with outstanding udders on both sides of the pedigree. First progeny sells in this year's sale. Service sire on bred heifers selling!
- Owned with MGM Polled Herefords, Hartford, Wis.; and Paul & Bette Slayton

- Garfield sires extremely eye appealing progeny with a lot of eye pigmentation and thick, dark colored, extra bone, sound feet and legs on his sons and daughters. Garfield has a powerful family history — a flush mate brother to the \$100,000 Genesis and the 2020 NWSS Champion Pen of Three Heifers. The pick of Garfield's flush mate sisters sold for 1/3 interest for \$50,000. In his own right, he's a stylish, dark red, fully pigmented bull with flawless structure, great feet and legs. Looking for performance: Top 5% for WW, YW and MG. Looking for fertility: Top 10% SC. Looking for maternal: Top 15% for MM and MCE. Looking for carcass: Top 20% CW, REA, MARB and CHB. He is the TOTAL PERFORMANCE package!
- Owned with Loewen Herefords, Waukomis, Okla.; and 4B Herefords, Hennessey, Okla.

- Mendel is a balanced trait bull that can be used in your heifer program and still gives you a top end calf at weaning! Acquired Full Possession on him a couple years ago before my heart surgery. Homozygous polled, impressive to look at and his EPD profile is mouthwatering! Top 10% in the breed in 15 traits. First daughters calved here last year, with nice udders and plenty of milk!
- Owned with Candy Meadow Farms, Lexington, Tenn.; and Loewen Herefords, Waukomis, Okla.

- We lost 40F a couple summers ago and he has been greatly missed. His first daughters came in production last year and all did a great job raising their calves. Another total performance sire who checks all the boxes. Exceptional ribeye area and marbling EPDs. Out of Reva 20A, whose progeny has sold extremely well.

SPEARHEAD LOEWEN CT KASSERINE

- Kasserine is a big spread bull — from light birth weight to heavy yearling growth that is safe to use on heifers and will still sire top performing calves. We had the first calves from him last spring and they were all our lightest birth weight calves. Kasserine is a maternal brother to Spearhead 22S Corps Command. Combine his great carcass traits and the quality of his dam — and you have a top herd bull.

CT TODD 130J

- Todd was one top selling bull in the 2023 sale going to Sandhill Farms, Haviland, Kan. A proven heifer safe bull that has a big spread from birth to yearling. His progeny combines exceptional phenotype with impressive EPD data.

Spring Yearling Bulls

These eight yearling Hereford bulls were raised by their dams with minimal creep feed until Thanksgiving when they were weaned. After weaning, they were fed with the rest of the calves until Christmas time when they were sorted off and fed separately. MD and DB test results coming prior to the sale.

- Sired by Dylan, now deceased herd sire here. Dylan has been a solid, total performance sire. He will continue to be used here as he does everything right. This bull is thick made and out of a very nice first calf Mendel daughter. Another bull that should work well on first calf heifers.

Fall Yearling Bulls

The fall yearling bulls are managed differently than the coming two-year-olds. They do receive some creep feed during the winter to help them develop depending on weather conditions. They were weaned at the end of April of this past year and fed for about a month, then turned onto grass for the summer. The yearling weights reflect these bulls being on grass until November 15. MD and DB test results coming prior to the sale.

- BW 84 lbs.
- This is a very good bull here. His mother has produced some good cattle here. Light birthweight with growth — his daughters will be highly maternal.

Two-Year-Old Bulls

The two-year-old bulls were raised without creep feed and fed a high roughage ration from weaning to yearling. We feed for a moderate gain, and not for a maximum yearling weight or high carcass data. We think this is harmful to the bull's development and longevity. They were on pasture from May 1 to November 15, and have been since on a corn silage, hay and grain mix to sale time.

- BW 86 lbs.
- Horned.
- This outstanding dehorned Hutton son comes from a cow we purchased from our long-time good friends in Canada, the Crittenden Bros. This bull should work extremely well on a set of black cows to produce those market topping black baldy calves.

ADD VALUE

WITH FEEDER CATTLE & REPLACEMENT FEMALE PROGRAMS

HEREFORD ADVANTAGE

An industry-changing feeder cattle marketing program through IMI Global to verify and add value to Hereford-influenced feeder cattle with superior genetics, health and management.

MATERNAL ADVANTAGE

A unique marketing program designed to add value to Hereford-sired commercial replacement females with added fertility, feed efficiency, profitability and docility.

PREMIUM RED BALDY

Take advantage of hybrid vigor by maximizing the best traits of Hereford and Red Angus genetics that provide commercial producers with premium replacement females.

Bred Heifers

The bred heifers selling come from the heart of the cow herd here. This is without a doubt the best set of females we've offered for sale here. In the past sales, we've had females go on to make donor cows for their new owners, as well as individuals that turned in to be cornerstone type females in purebred herds and many commercial herds. There is no better investment than a bred female. You get a quicker return on investment, and these heifers will provide you longevity in your herd.

- Opportunity abounds here! This super Genesis bred heifer comes from a beautifully designed 4013 descendant that we purchased from Dry Creek Farms that was in their donor program. She was the dam of one of the top selling lots in the 2024 Cattlemen's Congress sale. Definitely one female that shouldn't leave the farm, but we wanted to offer our very best.
- Pasture exposed from May 16 to Aug. 3, 2024, to MGM Vanguard Momentum 2K.

BLACK BALDY HEIFERS

- Sire by Garfield and Momentum.

Understanding Hereford EPDs

The American Hereford Association (AHA) currently produces expected progeny differences (EPDs) for 17 traits and calculates three profit indexes. AHA's genetic evaluation makes use of a Marker Effects Model that allows the calculation of EPDs by incorporating the pedigree, phenotypic and genomic profile of an animal. Animals that have a genomic profile will be denoted with a GE-EPD logo.

The current suite of Hereford EPDs and profit indexes includes:

Calving Ease — Direct (CE)

CE EPD is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CE EPD of 6 and sire B has a CE EPD of -2, then you would expect on average, if comparably mated, sire A's calves would have an 8 percent more likely chance of unassisted calving when compared to sire B's calves.

Birth Weight (BW)

BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average, if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

Weaning Weight (WW)

WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves.

Yearling Weight (YW)

YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

Dry Matter Intake (DMI)

The DMI EPD predicts the daily consumption of pounds of feed. For example, if sire A has a DMI EPD of 1.1 and sire B has a DMI EPD of 0.1, you would expect sire B's progeny, if comparably mated, to consume on average 1 pound of feed less per day.

Scrotal Circumference (SC)

Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality, and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a 0.7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm.

Sustained Cow Fertility

The AHA's new SCF EPD is a prediction of a cow's ability to continue to calve from three years of age through 12 years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the 10 possible calvings to 12 years old expressed as a probability. For example, the daughters of a bull with a 30 EPD would have the genetic potential to have one more calf by age 12 than the daughters from a bull with a 20 EPD. In other words, the daughters from the 30 EPD bull would have a 10% greater probability of having one more calf than the bull with a 20 EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

Maternal Milk (MM)

The MM EPD of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

Maternal Milk & Growth (M&G)

The M&G EPD reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of the daughter's progeny weaning weight. A bull with a 29 lb. M&G EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull's daughters with a M&G EPD of 10 lb. (29 minus 10 = 19 lb.). It is equal to one-half the sire's weaning weight EPD, plus all of his MM EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. It is sometimes referred to as "total maternal" or "combined maternal."

Maternal Calving Ease (MCE)

MCE EPD predicts how easily a sire's daughters will calve at two years of age and is measured on a percentage. For example, if sire A has a MCE EPD of 7 and sire B has a CE EPD of -3, then you would expect on average if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

Mature Cow Weight (MCW)

The MCW EPD was designed to help breeders select sires that will either increase or decrease mature size of cows in the herd. The trait was developed after years of cow weight data collection and the EPD relates directly to the maintenance requirements of a cow herd. For example, if sire A has a MCW EPD of 100 and sire B has an EPD of 85, then you would expect the females of sire A, if comparably mated, to be 15 lb. heavier at mature size.

Udder suspension (UDDR)

UDDR EPDs are reported on a 9 (very tight) to 1 (very pendulous) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment.

For example, if sire A has a UDDR EPD of 0.4, and sire B has a UDDR EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score better udder suspension in daughters of sire A, compared to sire B.

Teat size (TEAT)

TEAT EPDs are reported on a 9 (very small) to 1 (very large, balloon shaped) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment.

For example, if sire A has a teat size EPD of 0.4, and sire B has a teat size EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score smaller teat size in daughters of sire A, compared to sire B.

Carcass Weight (CW)

CW EPD is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight. For example, if sire A has a CW EPD of 84 and sire B has a CW EPD 64, then you would expect the progeny of sire A, if harvested at the same age constant endpoint, to have a 20-lb. advantage in terms of hot carcass weight.

Rib Fat (FAT)

The FAT EPD reflects differences in adjusted 365-day, 12th-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative FAT EPDs, are expected to produce leaner progeny than sires with higher EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Ribeye Area (REA)

REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Marbling (MARB)

MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, [IMF]) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Baldy Maternal Index (BMIS)

The BMIS is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

Brahman Influence Index (BIIS)

The BIIS is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed towards a commodity beef market since Certified Hereford Beef® does not accept Brahman influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability in finishing non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. This index targets producers that use Hereford bulls on Brahman influenced cows.

Certified Hereford Beef Index (CHBS)

The Certified Hereford Beef Index (CHBS) is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows where all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight and Marbling to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. In addition, there is a positive weighting for Rib-eye Area and a negative weighting for Back Fat to maintain desirable Yield Grades. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.

TOTAL PERFORMANCE SIREs From TEGTMEIER

**MGM VANGUARD
MOMENTUM 2K
P44373730**

Performance shines through
outstanding EPDs.
11 traits in the top 10%.

*Owned in Partnership by:
Tegtmeier Polled Herefords
MGM and S & J Merry & Family
Paul & Bette Slayton*

LOEWEN 4B GARFIELD B42 G24 ET
Full flush brother to the \$100,000
LOEWEN GENESIS G16 ET.
Producing donor-worthy daughters.

SPEARHEAD LOEWEN CT KASSERINE

Maternal brother to the popular
SPEARHEAD CORPS COMMAND.
Destined to deliver
exceptional calving ease.

LOEWEN CMF MENDEL 7G

This great son of DEVOUT
is siring calving ease, performance
and super females!

SEMEN AVAILABLE

Sale Last Saturday in February

Russ Tegtmeier - 402.865.5805 h / 402.335.0470 c * Burchard, NE

Sire Details and Sire Info at **TegtmeierPolledHerefords.com**

Tegtmeier Polled Hereford
71556 609 Ave
Burchard, NE 68323

FEB. 22, 2025
1:00 p.m.
Burchard, NE

Sale Takes Place
at the Farm
Burchard, NE

Farm Location:
3 miles north,
3 miles W and 1/2 mile N
of Burchard
or
3 1/2 miles S
of Lewiston

An Offering
to Get Your Motor
Running!

35 Polled Hereford Bulls
40 Bred & Open Females
